Edited by David H. Ahl Program Conversion by Steve North Illustrations by George Beker

> Workman Publishing New York

All of the programs listed here run, without error, in Microsoft Basic Version 3 0 or higher While most users will encounter no problems in entering and running the games, some microcomputer Basics may require program conversion. If you are a newcomer to personal computing, do not attempt to enter the longest program first. This will only result in frustration and confusion. You must become familiar with your Basic's capabilities and limitations before attempting one of the longer programs.

THE AUTHOR

David H Ahl is a computer hacker from way back He learned to program in 1956 on a Burroughs B-200 in Algol and CAL (Cornell Assembly Language) and has worked with such diverse beasts as the Bendix G-15 and G-20, IBM 650, 704, 7090, 1401, 1130, 360/40 and 360/50, CDC 3200 and 3600, GE 115, 235, and 635, HP 2000, NCR Century 50 and 100, DEC PDP-8, 10, 11, 12 and 15 as well as virtually every microcomputer made to the present day.

He wrote his first computer game about a week after learning to program and has been involved ever since in both serious games (Carnegie-Mellon management game, U.S. energy simulation) as well as games for fun. His career has been intertwined with computers in market research and new product forecasting, educational research, marketing of computers to schools and colleges, teaching, and lecturing. Now, as Publisher of *Creative Computing* magazine he is continuing to pioneer new computer applications for fun and fortune.

ACKNOWLEDGEMENTS

With a book like this one, it's difficult to know where to begin with acknowledgements.

Game Authors. Thank you, each and every one for creating your game in the first place.

Steve North. For working way beyond the call of duty transcribing, modifying, converting, and debugging all the games in MITS BASIC A truly herculean task!

John Lees. For assisting Steve North in the conversion effort

Jim West. For listing and playing all the "standard" BASIC games from my timesharing accounts

Teletype Corporation. For the loan of the 43 Teleprinter to do the listings and runs.

Bob Albrecht. For his continuing contribution to the world of computer games and for setting me straight as to who wrote what.

Dartmouth College. For recognizing games as a legitimate educational tool and allowing them to be written and played on the Dartmouth timesharing system **Microcomputer Manufacturers.** For putting computer games within the reach of every American in the comfort of their own home.

Introduction

You're seated in a heavily padded chair which is vibrating ever so slightly. All of a sudden you feel a jolt and your viewscreen, which has previously been black, shows the receding form of the lunar command module. It will continue to orbit around the moon two hundred miles up while you land your LEM and explore the moon. Your viewscreen now shows that you are beginning to tumble, so you hit the button on your right joystick to give a short burst on the starboard stabilization rockets. A few more short bursts right, left, then right again and your viewscreen shows that you've stabilized your craft and that you're headed smoothly, if rather rapidly, toward the lunar surface. In panic you realize that you've taken a long time with your stabilizing maneuvers so you jab the retro rocket firing control on full. Your viewscreen is now obscured by the flames so you switch to a computer display which shows your spacecraft and its position as you approach the moon. You manage to slow your craft, however, you see that you're heading for the side of a crater and you don't have enough time for positional maneuvers. You switch your viewscreen back on and hope for the best. Unfortunately, the crater walls are steep and one leg of your LEM makes contact before the others. It buckles and the craft topples over. At this, Mission Control in Houston sends you a radio message, "Ground telemetry records severe craft damage. You have 13.2 days of oxygen. Information on rescue attempt to follow Don't panic."

You punch another button on your console and your screen lights up, "Lunar Landing Simulation complete. Try again?" You lean back in your easychair, palms moist with perspiration and type, "No. Get Football." A moment later a referee and the hulking shape of Roger Staubach appears on the screen. The ref turns and asks you, "Heads or tails?"

Far-fetched? Not at all. Technologically this is all possible today. From an economic standpoint it will take a few more years before systems with these capabilities are within reach of the average consumer. But even today some amazing games are possible with the current breed of home computers. That's what this book is all about: games for home microcomputers, minis, timesharing systems and even large mainframes—in short, any computer that speaks Basic.

Computer games are not a new phenomenon. Back in 1952 shortly after the first commercial computers were introduced, A. L. Samuel at IBM wrote a checkers program for the IBM 701. It was written with the idea that a great deal could be learned about the human thought process if one could simulate it on a computer. This also was the reason that Newell, Shaw, and Simon a few years later at Rand Corporation wrote the first computer chess program. But even to those uninitiated in the field of artificial intelligence research, these programs were great fun as games even if they didn't play outstanding chess or checkers.

But while these programs were being written as part of research projects, a much larger group of people were furtively writing and playing games at lunchtime and before and after work on their employers' computers. There were at least two or three of these fanatical game players, sometimes more, at each computer installation of any size. The advent of the minicomputer and timesharing networks in the early 1960's expanded this community of computer

hackers and by 1966 they were meeting at various professional society meetings and laying out plans for a computer chess tournament.

The hard core of the hackers, the real cultists, were those that were into Spacewar. Originally written by some hackers at the MIT EE Department back in 1961-62 for a DEC PDP-1, the first minicomputer, Spacewar spawned a fanatical community of hackers who played, modified, improved and experimented with it.

"Ah, Spacewar. Reliably at any nighttime moment, hundreds of computer technicians are effectively out of their bodies, computer-projected onto CRT display screens, locked in life-or-death space combat for hours at a time, ruining their eyes, numbing their fingers in frenzied mashing of control buttons, joyously slaying their friends and wasting their employers' valuable computer time. Something basic is going on." (Stewart Brand in *II Cybernetic Frontiers*.)*

Item: October 10, 1972. The PDP-10 at the Stanford Al Laboratory is reserved from 8:00 p.m. on for the "Intergalactic Spacewar Olympics."

Item: October 1976. Cromemco announces Spacewar for the 8080 and TV Dazzler. Paper tape \$15.00.

In layman's terms what those two items mean is that in the short span of four years Spacewar went from a game that required the use of a multi-million dollar computer to a game that could be played on a \$1,000 home computer.

What happens to a fanatical cult when you open the temple doors and let everyone take its source into their own homes? Obviously, we don't know since the temple hasn't been open that long, but it seems obvious that this same generation of kids that can't do manual math or use a slide rule because of the pocket calculator may learn that a TV set can throw some actively challenging things their way instead of just a passive picture.

About this Book

Basic Computer Games: Microcomputer Edition is a major revision of my first book, 101 Basic Computer Games published in 1973 by Digital Equipment Corporation. The programs in the original book represented six different versions of Basic. The programs in this book all run in Microsoft Basic (more about that later on page XII). There were several programs that couldn't be converted or weren't worth converting to Microsoft Basic. These were deleted and replaced with new programs.

Program listings were done on a Teletype Model 43 terminal. Its 7×9 dot matrix printer coupled with its 13.2 characters per inch spacing gives it exceptionally high legibility, even when reduced to 64% as it has been done in here. I salute those of you with the first book who patiently, magnifying glass in hand, deciphered nearly illegible listings and got those programs up and running. This book should make that task considerably easier.

David H. Ahl September, 1978

^{*}Steward Brand, II Cybernetic Frontiers, New York, Random House, 1974.

The Basic Language

Be sure to read this section before entering any of the games in this book on your computer. It will save you time and minimize potential problems.

The games in this book were written by a wide cross section of people on a variety of computers over a tenyear period. Most of the games were originally written for time-sharing systems such as the DEC Timeshared 8 and RSTS-11, HP 2000, and CDC 3600.

The first edition of this book was originally published in the early 70's. All the programs were printed in their original dialect of Basic. One of the major functions of the book was to give computer users an opportunity to learn more about their own and other versions of Basic. For example, a dimensioned string variable such as A\$(I) had an entirely different meaning in DEC and HP Basics. The designers of each version of Basic had good reasons for doing what they did and it was (and is) very instructive to understand how different approaches work and their respective rationales.

In 1975, a small company in the telemetry business, M.I.T.S., introduced the first computer for hobbyists, the Altair 8800. This signaled the start of an immense new industry: personal computers. Ed Roberts, president of M.I.T.S., contracted with a small consulting company started by two bright young programmers to write a version of Basic for the Altair.

The name of the consulting company was Microsoft, and the Basic that Bill Gates and Paul Allen devised soon came to be known, appropriately enough, as Microsoft Basic. It was modeled on Basic-Plus, originally a creation of Nathan Teichholtz at Digital Equipment Corporation. Nathan is an unsung hero in the history of the Basic language and deserves a great deal of credit for this vastly improved version of the language. And in the kudos department, we must always remember to bow low to John Kemeny and Tom Kurtz of Dartmouth, the creators of the original Basic.

In any event, in 1977 it appeared that Microsoft Basic was fast becoming the standard Basic for microcomputers, and the programs in this book were all converted to Microsoft Basic, Revision 4.0. For about three years, this Basic truly was the standard.

However, three things conspired against it becoming the all-time standard. First, it was written for the 8080 (and Z80) microprocessor, and later mpu's had capabilities (and idiosyncrasies) that the 8080 did not have, hence, slight differences started creeping into Microsoft Basic on later computers.

Second, not all computer manufacturers wanted to contract with Microsoft to write Basic for their computers and so some wrote their own. This has led to some particularly interesting (and confusing) dialects of Basic.

Third, as computer hardware became more powerful

with 16-bit mpu's, special chips for graphics and sound, Winchester disk drives, modems, and other peripherals, various extensions and changes had to be made to the software. Some of these changes are in the operating system and are transparent to the user, but others affect the Basic language.

So, what you are holding is a book of thoroughly debugged programs that can be entered directly and will run perfectly on some computers, while on other computers they will not run at all. What can you do about it if you have a computer on which the programs will not run?

First, do not call or write us. You have paid less than a dime per program and, after everyone has taken his share, we have made less than 1 cent per program; for that, we can't afford to act as personal consultants.

Second, please keep in mind that every program runs perfectly in Microsoft Basic 4.0. The sample runs are not faked; they came off a real computer exactly as they appear. There are no typographical errors in the programs — misspellings maybe — but the functional code is absolutely correct.

Third, the early versions of the books had programs in 15 or 20 vastly different dialects of Basic, yet hundreds of thousands of purchasers managed to convert the programs to their machines and get them going.

The key to converting the programs is to understand how Microsoft Basic works compared with your Basic. While we cannot present an entire manual on Microsoft Basic, we have included in the next section information on the key elements of the language and those likely to be different in other implementations.

If direct conversion doesn't work, do some "reverse engineering," (as it known in the computer industry). This means taking apart a program and drawing a flowchart of the logic. With a flowchart in hand, you can then write your own program to do the same thing, but often faster and better.

Since many of the programs were originally written in what today would be considered a primitive version of Basic, there are many ways of substantially shortening and improving some of these programs.

You should also keep in mind that all of these programs were written on computers which used an ASR-33 Teletype terminal. These are massive clunkers with 72 (or 80) columns of output, upper case only, and no graphics capability whatsoever. Naturally, you will have to do a fair amount of reformatting if your computer has only 40 columns (Apple, etc.), 32 columns (Sinclair), 28 columns (TI), or 20 columns (Epson HX-20). It can be done; for another book, I converted Hammurabi, Lunar Lander, and Gunner, all of which use 72 columns, to all the computers mentioned above.

The programs in this book use the following statements and functions in Microsoft Basic:

Statements		
DATA	Holds numeric or string data for a READ statement	20 DATA 4,6,"AHL"
DEF FNA(X)	Defines any function of X	20 DEF FNA(X)=3*X-2 20 DEF FNA(X)=SIN(X/57.3)
DIM	Declares maximum size of string or numeric array. Array subscripting begins at 0 although many programs do not use the zero subscript.	20 DIM A(50) 20 DIM A\$(25),B1\$(50)
END	Last statement in program	9999 END
FORTO(STEP)	Executes a loop. The test for ending the loop is made after the loop has been executed. Upon exiting, the counter value equals the upper limit plus the step. For example, 10 FOR J=1 TO 3 20 PRINT "HI" 30 NEXT J will print "HI" three times, and J will equal 4 when the loop is finished.	20 FOR I=1 TO 30 20 FOR J=2 TO N STEP 3
GOSUB n	Branch to subroutine n	20 GOSUB 200
GOTO n	Branch to statement n	20 GOTO 50
IFTHEN n	Branch to statement n if condition is true	20 IF A>1 THEN 50
IFTHEN stmts	Executes statements if condition is true. Drops to next numbered line if false.	20 IF Z<5 THEN A=1:PRINT B
IFTHEN n ELSE m	Branch to n if true or to m if not true	20 IF X=Y THEN 50 ELSE 90
IFTHEN stmts ELSE stmts	Does statements after THEN if true, stmts after ELSE if false	20 IF Z>R THEN X=1 ELSE X=2
INPUT	Requests data from keyboard. The prompt string is optional	20 INPUT N 20 INPUT "YES OR NO";Z\$
LET	Assigns value of expression to variable. The word LET is optional	20 LET A=1 20 Z\$="DRY"
NEXT	Marks end of FOR loop	20 NEXT J
ON m GOSUB	Branch to mth subroutine	20 ON X GOSUB 100,200
ON m GOTO	Branch to mth line no. In these statements, m must be an integer starting at 1 and increasing by 1	20 ON Y GOTO 50,80,120
PRINT	Displays strings, constants and variables. Calculations can be done within a PRINT statement	20 PRINT "A=";A 20 PRINT Z\$,10*A+B
READ	Moves values of DATA into variables	20 READ N,X1,A\$
REM	Remark. Does not execute	20 REMARKABLE PROGRAM
RESTORE	Resets DATA pointer to first item in list	20 RESTORE
RETURN	Go to statement following last GOSUB	20 RETURN
STOP	Terminate program	20 STOP

Functions	
ABS (X)	Absolute value.
ASC(X\$)	Returns the ASCII value of the first
(, ,	character in the string argument.
	ASC("A") is 65,ASC("B") is 66, etc.
ATN(X)	Arctangent
CHR\$(X)	Converts ASCII value to a char-
σ ()	acter string. CHR\$(65) is "A", etc.
	CHR\$(7) is a bell ring.
COS(X)	Cosine
EXP(X)	Value of e raised to the X power
INT(X)	Integer function
LEFT\$(X\$,Y)	The leftmost Y characters in X\$
LEN(X\$)	Number of characters in X\$
LOG(X)	Log of x to the base e
MID\$(X\$,Y,Z)	Takes Z characters from X\$ start-
	ing at position Y
RND(1)	Returns a random number be-
, ,	tween 0 and 1.
RIGHT\$(X\$,Y)	The rightmost Y characters in X\$
SGN(X)	Sign function. Returns -1 if X is
	negative, 0 if x is zero, 1 if x is
	positive.
SIN(X)	Sine
SQR(X)	Square root
STR\$(X)	Converts X to a string of decimal
	digits, for example if X was 8.45 it
	would be converted to the string
	"8.45".
TAB(X)	Spaces over to position X on the
	terminal.
TAN(X)	Tangent
VAL(X\$)	Returns the numerical value of the
	string of digits in X\$. Opposite of
	STR\$(X).

In Microsoft (Altair) BASIC, any expression may be evaluated as either true or false. A true condition will return a value of -1, and a false condition 0. Thus, if we say LET Q= -(X=Y), Q=1 if X=Y and Q=0 if X=Y. This logical evaluation of expressions is only used in the Hexapawn game in the user-defined function and with a little ingenuity could be replaced with a look-up table. A few other games use the logical AND and OR operators, which work in a straightforward manner.

The programs in this book were printed on a printer that uses a caret (\land) to indicate exponentiation. This is equivalent to an up arrow. Incidentally, exponentiation and taking roots are among the least accurate functions on small computers. For example, try this program.

10 INPUT N 20 I=SQR(SQR(N)) 30 J=(I12)12 40 PRINT N,J 50 GOTO 10

Chances are good that N and J will not be the same 25% or more of the time. You can improve the accuracy by substituting J*J for J squared or J*J*J for J cubed.

Microsoft Basic permits more than one statement on a line when the statements are separated by a colon (:). As noted above, in an IF..THEN statement, if the condition is false, control drops to the next numbered line, not to the next statement on the same line.

This means that for TI and other computers that do not permit multiple statements on one line, you will have to insert additional lines. This may be difficult when line numbers are close together. One easy solution is to add a zero to all line numbers, but you must remember to do this in IF..THEN, GOTO and GOSUB statements as well as changing all the numbered lines.

The random function can be especially irksome as it is one that differs widely on different versions of Basic. In Microsoft Basic, RND(1) returns a value between 0 and 0.999999. This is the convention used in all programs in this book. On some computers, you may have to use RND(0), and on others just RND.

Conversion to other Basics

Radio Shack BASIC: Approximately 25 of the games which do not use strings will run under Level 1 BASIC; another 20 or so may be converted relatively easily by converting to all numeric input (1 instead of YES, 0 for NO, etc.). In Level 2, change RND (1) to RND (0). Also function definitions, when used, must be expanded.

Apple II BASIC: All programs will run directly in Applesoft Basic with little or no modification. In integer Basic, strings are similar to HF Basic. Also, multiple statements on one line work differently than with Microsoft Basic.

DEC BASIC PLUS: Programs written in Altair BASIC should be completely compatible with DEC BASIC PLUS.

HPBASIC: Some conversion will be required to get certain programs to run in HP BASIC. First, HP BASIC does not have a zero subscript for arrays. So if, in a program, the zero subscript is used, HP BASIC will report a subscript out of bounds error. The solution is to add one to all the array subscripts if it is determined that the program does use the zero subscript.

Second, HP BASIC character strings differ from Altair BASIC. There are no string arrays. So if string arrays are used in some program, a conversion must be made. Possibly the string array could be converted into a single string, or a numeric array, or a series of data statements, or possibly a data file. Also, HP BASIC does not have RIGHT\$, LEFT\$ or MID\$ functions. Instead substitute the normal HP string subscripting conventions [for instance, RIGHTS\$(X\$,2) becomes X\$(LEN(X\$)-1, LEN(X\$)].

Third, HP BASIC does not have multiple statements on one line. Convert multiple statement lines to several separate lines.

SWTPC 6800 BASIC: Versions 2.0 and above of this BASIC should be nearly compatible. Like HP BASIC, SWTPC BASIC does not allow the zero subscript. Also, character strings may not contain more than 32 characters. Note that in Altair BASIC, RND(1) is used to get random numbers, rather than RND(0) as in SWTPC BASIC. These comments also apply to **MSI Disk BASIC.**

TDL ZAPPLE 8K and 12K BASIC: All the programs are executable in both TDL BASICs. However TDL ZAPPLE BASIC has a RANDOMIZE verb which should be inserted at the beginning of a program to get true pseudorandom numbers.

Sol BASIC: The programs will work directly in Sol Extended Basic. Many programs will run in 5K Basic but the majority will require considerable conversion.

PET BASIC: Commodore PET BASIC is identical to the BASIC used in this book. Thus, all the games will run without any conversion.

Cromemco 16K Extended BASIC: Cromemco BASIC allows multiple statements, but certain statements must be the last statement on a line, so some rearrangement may be necessary. Two-dimensional arrays must be dimensioned explicitly (there is no default to a 10 by 10 dimension). Also, strings in Cromemco BASIC are implemented like HP BASIC, not Altair BASIC.

Ohio Scientific BASIC: Most programs will run directly on Challenger 2P and larger systems. The 32-characters per line display of the Challenger 1P and Superboard will require conversion of the program output routines.

IMSAI 8K BASIC: Programs are executable with little or no modification.

North Star Disk BASIC: North Star BASIC has character strings like HP BASIC, so some conversion will be required. Also note that the function SQRT is used in place of SQR.

PolyMorphic 11K BASIC: The multiple statement separator is a backslash (/), not the colon. Like North Star BASIC, SQRT is used instead of SQR. In Poly BASIC, you're not allowed to exit a FOR loop prematurely, except by using the EXIT verb. So whenever you see an IF...THEN out of a FOR loop, use the EXIT verb. Also note that in order to get random numbers, RND must be used with a "seed" value between 0 and 1, which determines at what point in the sequence of random numbers the RND function starts. This seed value is usually based on the time of day. After initializing the RND function, use RND(0) to get random numbers.

BASIC-E (runs under CP/M Disk Operating System): All arrays must be dimensioned (there is no default). The RANDOMIZE verb should be used, at the beginning of the program, to get random numbers. Also, multiple statements are not allowed, so conversion to several single statement lines will be necessary.

The Games [[]

Acey Ducey

This is a simulation of the Acey Ducey card game. In the game, the dealer (the computer) deals two cards face up. You have an option to bet or not to bet depending on whether or not you feel the next card dealt will have a value between the first two.

Your initial money (Q) is set to \$100; you may alter Statement 110 if you want to start with more or less than \$100. The game keeps going on until you lose all your money or interrupt the program.

The original program author was Bill Palmby of Prairie View, Illinois.

ACEY OUCEY CARO GANE
CREATIVE CONPUTING NORRISTOWN, NEW JERSEY

ACEY-DUCEY IS PLAYEO IN THE FOLLOWING MANNER THE BEALER (COMPUTER) OEALS TWO CAROS FACE UP YOU NAVE AN OPTION TO BET OR NOT BET DEPENDING ON WHETHER OR NOT YOU FEEL THE CARO WILL HAVE A VALUE BETWEEN THE FIRST TWO.

IF YOU OO NOT WANT TO BET, INPUT A O YOU NOW HAVE 100 DOLLARS

NERE ARE YOUR NEXT TWO CAROS

WHAT IS YOUR BET? 25 QUEEN SORRY, YOU LOSE YOU NOW HAVE 75 DOLLARS

NERE ARE YOUR NEXT TWO CAROS 4 10

WHAT IS YOUR BET? 25 10 SORRY, YOU LOSE YOU NOW HAVE 50 OOLLARS

HERE ARE YOUR MEXT TWO CAROS 8 OUEEN

WHAT IS YOUR BET? O CHICKEN!!

NERE ARE YOUR NEXT TWO CAROS

WHAT IS YOUR BET? 20 10 SORRY, YOU LOSE YOU NOW HAVE 30 OOLLARS

HERE ARE YOUR NEXT TWO CAROS 9
JACK

WHAT IS YOUR BET? O CHICKEN!!

NERE ARE YOUR NEXT TWO CAROS JACK QUEEN

Amazing

This program will print out a different maze every time it is run and guarantees only one path through. You can choose the dimensions of the maze — i.e. the number of squares wide and long.

The original program author was Jack Hauber of Windsor, Connecticut.

Animal

Unlike other computer games in which the computer picks a number or letter and you must guess what it is, in this game you think of an animal and the computer asks you questions and tries to guess the name of your animal. If the computer guesses incorrectly, it will ask you for a question that differentiates the animal it guessed from the one you were thinking of. In this way the computer "learns" new animals. Questions to differentiate new animals should be input without a question mark.

This version of the game does not have a SAVE feature. If your system allows, you may modify the program to save array A\$, then reload the array when you want to play the game again. This way you can save what the computer learns over a series of games.

At any time if you reply "LIST" to the question "ARE YOU THINKING OF AN ANIMAL," the computer will tell you all the animals it knows so far.

The program starts originally by knowing only FISH and BIRD. As you build up a file of animals you should use broad, general questions first and then narrow down to more specific ones with later animals. For example, if an elephant was to be your first animal, the computer would ask for a question to distinguish an elephant from a bird. Naturally there are hundreds of possibilities, however, if you plan to build a large file of animals a good question would be "IS IT A MAMMAI"

This program can be easily modified to deal with categories of things other than animals by simply modifying the initial data in Line 530 and the dialogue references to animal in Lines 10, 40, 50, 130, 230, 240, and 600. In an educational environment, this would be a valuable program to teach the distinguishing characteristics of many classes of objects — rock formations, geography, marine life, cell structures, etc.

Originally developed by Arthur Luehrmann at Dartmouth College, Animal was subsequently shortened and modified by Nathan Teichholtz at DEC and Steve North at Creative Computing.

Your Home

Your Side

Awari is an ancient African game played with seven sticks and thirty-six stones or beans laid out as shown above. The board is divided into six compartments or pits on each side. In addition, there are two special home pits at the ends.

A move is made by taking all of the beans from any (non-empty) pit on your own side. Starting from the pit to the right of this one, these beans are 'sown' one in each pit working around the board anticlockwise.

A turn consists of one or two moves. If the last bean of your move is sown in your own home you may take a second move.

If the last bean sown in a move lands in an empty pit, provided that the opposite pit is not empty, all the beans in the opposite pit, together with the last bean sown are 'captured' and moved to the player's home.

When either side is empty, the game is finished. The player with most beans in his home has won.

In the computer version, the board is printed as 14 numbers representing the 14 pits.

The pits on your (lower) side are numbered 1-6 from left to right. The pits on my (the computer's) side are numbered from my left (your right).

To make a move you type in the number of a pit. If the last bean lands in your home, the computer types 'AGAIN?' and you then type in your second move.

The computer's move is typed, followed by a diagram of the board in its new state. The computer always offers you the first move. This is considered to be a slight advantage.

There is a learning mechanism in the program that causes the play of the computer to improve as it plays more games.

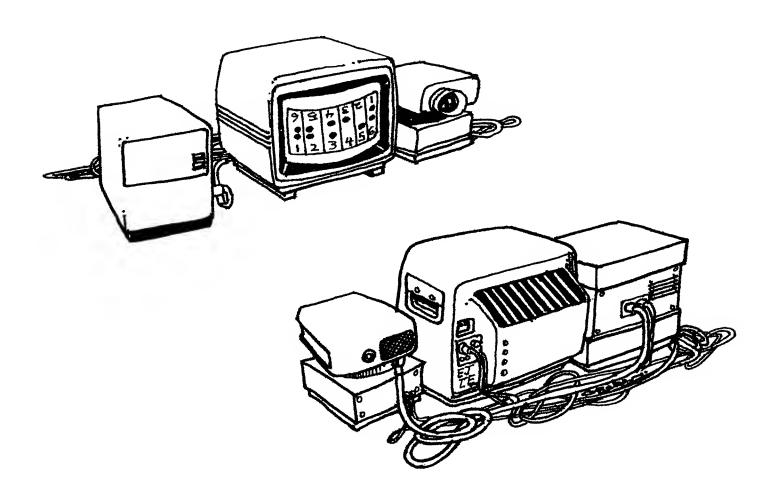

This version of Awari is adopted from one originally written by Geoff Wyvill of Bradford, Yorkshire, England.

ge

In this game, the computer picks a 3digit secret number using the digits 0 to 9 and you attempt to guess what it is. You are allowed up to twenty guesses. No digit is repeated. After each guess the computer will give you clues about your guess as follows:

PICO

One digit is correct, but in

the wrong place

FERMI

One digit is in the correct

place

BAGELS No digit is correct

You will learn to draw inferences from the clues and, with practice, you'll learn to improve your score. There are several good strategies for playing Bagels. After you have found a good strategy, see if you can improve it. Or try a different strategy altogether and see if it is any better. While the program allows up to twenty guesses, if you use a good strategy it should not take more than eight guesses to get any number.

The original authors of this program are D. Resek and P. Rowe of the Lawrence Hall of Science, Berkeley, California.

Banner

This program creates a large banner on a terminal of any message you input. The length of the message may be as long as a string variable permits in your version of BASIC. The letters may be any dimension you wish although the letter height plus distance from left-hand side should not exceed 6 inches. Experiment with the height and width until you get a pleasing effect on whatever terminal you are using. The permissable letters and characters are defined in the data statements 899 through 940.

Many people seem to have trouble getting this program to work, however, after thorough checking we guarantee that the version presented have runs correctly. We suspect the problem is dependent upon the Basic itself and the way it reads and restores data files.

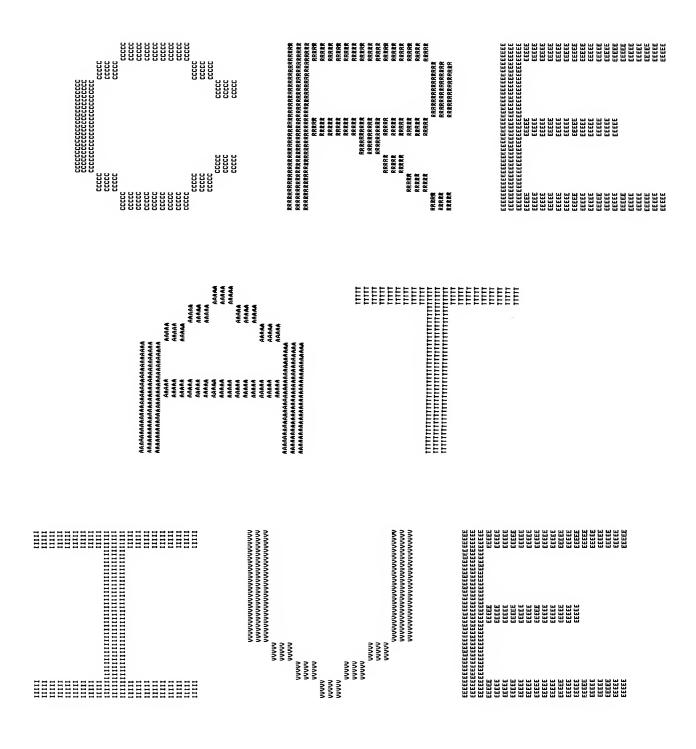

This program was written by Leonard Rosendust of Brooklyn, New York.

This program simulates a game of basketball between Dartmouth College and an opponent of your choice. You are the Dartmouth captain and control the type of shot and defense during the course of the game.

There are four types of shots: 1. Long Jump Shot (30 ft.), 2. Short Jump Shot (15 ft.), 3. Lay Up, and 4. Set Shot. Both teams use the same defense, but you may call it: Press (6), Man-to-man (6.5), Zone (7), or None (7.5). To change defense, type "0" as your next shot.

Note: The game is biased slightly in favor of Dartmouth. The average probability of a Dartmouth shot being good is 62.95% compared to a probability of 61.85% for their opponent. (This makes the sample run slightly remarkable in that Cornell won by a score of 45 to 42. Hooray for the Big Red!)

Charles Bacheller of Dartmouth College was the original author of this game.

BASKETBALL CREATIVE COMPUTING HORRISTOUH, HEW JERSEY

THIS IS DARTHOUTH COLLEGE BASKETBALL. YOU WILL BE DARTHOUTH JUHP SHOT.
CAPTAIN AND PLAYMAKER. CALL SHOTS AS FOLLOWS: 1. LONG. SHOT IS OFF RIN. CAPTAIN AND PLAYNAKER. CALL SHOTS AS FOLLOWS: 1. LONG (30 FT.) JUHP SHOT; 2. SMORT (15 FT.) JUHP SHOT; 3. LAY UP; 4. SET SHOT.

BOTH TEAMS WILL USE THE SAME DEFEMSE. CALL DEFEMSE AS FOLLOWS: 6. PRESS; 6.5 HAH-TO MAH; 7. ZOME; 7.5 HOHE. TO CMAHGE DEFEHSE, JUST TYPE O AS YOUR MEXT SHOT. YOUR STARTING DEFENSE WILL BET ?

CHOOSE YOUR OPPONENT? CORNELL CEHTER JUHP CORHELL CONTROLS THE TAP.

JUMP SHOT. SHOT IS OFF RIM. DARTHOUTH CONTROLS THE REBOUND.

YOUR SHOT? 2 JUHP SHOT SHOOTER IS FOULED. TWO SHOTS. SHOOTER HAKES BOTH SHOTS. SCORE: 2 TO 0

```

Batnum

The game starts with an imaginary pile of objects, coins for example. You and your opponent (the computer) alternately remove objects from the pile. You specify in advance the minimum and maximum number of objects that can be taken on each turn. You also specify in advance how winning is defined: 1. To take the last object or 2. To avoid taking the last object. You may also determine whether you or the computer go first.

The strategy of this game is based on modulo arithmetic. If the maximum number of objects a player may remove in a turn is M, then to gain a winning position a player at the end of his turn must leave a stack of 1 modulo (M+1) coins. If you don't understand this, play the game 23 Matches first, then BAT-NUM, and have fun!

BATNUM is a generalized version of a great number of manual remove-theobject games. The original computer version was written by one of the two originators of the BASIC language, John Kemeny of Dartmouth College.

Battle

BATTLE is based on the popular game Battleship which is primarily played to familiarize people with the location and designation of points on a coordinate plane.

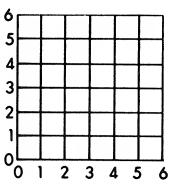

BATTLE first randomly sets up the bad guys' fleet disposition on a 6 by 6 matrix or grid. The fleet consists of six ships: Two destroyers (ships number 1 and 2) which are two units long, two cruisers (ships number 3 and 4) which are three units long and two aircraft carriers (ships number 5 and 6) which are four units long. The program then prints out this fleet disposition in a coded or disguised format (see the sample computer print-out). You then proceed to sink the various ships by typing in the coordinates (two digits, each from 1 to 6, separated by a comma) of the place where you want to drop a bomb, if you'll excuse the expression. The computer gives the appropriate responses (splash, hit, etc.) which you should record on a 6 by 6 matrix. You are thus building a representation of the actual fleet disposition which you will hopefully use to decode the coded fleet disposition printed out by the computer. Each time a ship is sunk, the computer prints out which ships have been sunk so far and also gives you a "SPLASH/HIT RATIO."

The first thing you should learn is how to locate and designate positions on the matrix, and specifically the difference between "3,4" and "4,3." Our method corresponds to the location of points on the coordinate plane rather than the location of numbers in a standard algebraic matrix: the first number gives the column counting from left to right and the second number gives the row counting from bottom to top.

The second thing you should learn about is the splash/hit ratio. "What is a ratio?" A good reply is "It's a fraction or quotient." Specifically, the splash/hit ratio is the number of splashes divided by the number of hits. If you had 9 splashes and 15 hits, the ratio would be 9/15 or 3/5, both of which are correct. The computer would give this splash/hit ratio as .6.

The main objective and primary educational benefit of BATTLE comes from attempting to decode the bad guys' fleet disposition code. To do this, you must make a comparison between the coded matrix and the actual matrix which you construct as you play the game.

The original author of both the program and these descriptive notes is Ray Westergard of the Lawrence Hall of Science, Berkeley, California.

Blackjack

This is a simulation of the card game of Blackjack or 21, Las Vegas style. This rather comprehensive version allows for up to seven players. On each hand each player may get another card (a hit), stand, split a hand in the event two identical cards were received or double down. Also, the dealer will ask for an insurance bet if he has an exposed ace.

Cards are automatically reshuffled as the 51st card is reached. For greater realism, you may wish to change this to the 41st card in Line 110. Actually, fanatical purists will want to modify the program so it uses three decks of cards instead of just one.

This program originally surfaced at Digital Equipment Corp.; the author is unknown.

BLACKJACK CREATIVE CONPUTING NORRISTOWN, NEW JERSEY

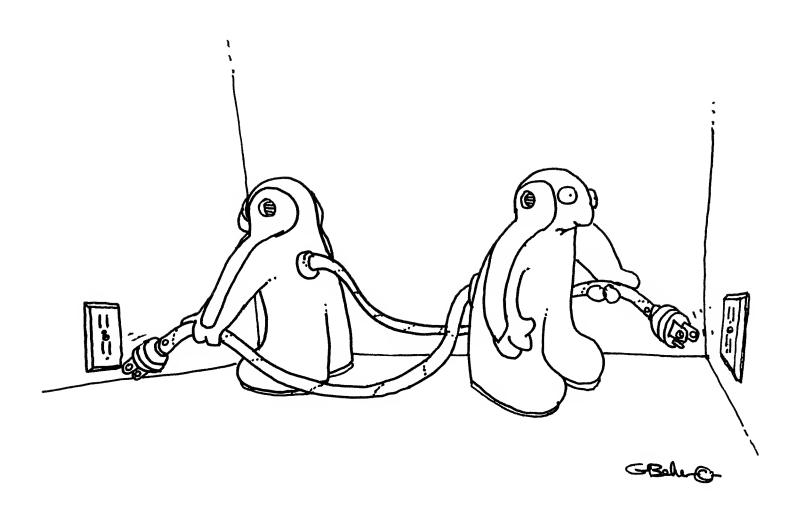

```
00 YOU WANT INSTRUCTIONS? YES
THIS IS THE GAME OF 21. AS MANY AS 7 PLAYERS MAY PLAY THE
CAME. ON EACH OEAL, BETS WILL BE ASKED FOR, AND THE PLAYERS' BETS SHOULD BE TYPED IN. THE CARDS WILL THEN BE
DEALT, AND EACH PLAYER IN TURN PLAYS NIS NANO. THE FIRST RESPONSE SHOULD BE EITHER 'O', INDICATING THAT THE PLAYER IS COUBLING DOWN, 'S', INDICATING THAT HE IS STANCING, 'H', INCICATING NE WANTS ANOTHER CARO, OR '/', INDICATING THAT HE WANTS TO SPLIT HIS CARDS. AFTER THE
INITIAL RESPONSE, ALL FURTHER RESPONSES SHOULD BE 'S' OR
'N', UNLESS THE CAROS WERE SPLIT, IN WHICH CASE DOUBLING
DOWN IS AGAIN PERNITTED. IN DROER TO COLLECT FOR
BLACKJACK, THE INITIAL RESPONSE SHOULD BE 'S'. NUMBER OF PLAYERS? 2

Bombardment

BOMBARDMENT is played on two, 5x5 grids or boards with 25 outpost locations numbered 1 to 25. Both you and the computer have four platoons of troops that can be located at any four outposts on your respective grids.

At the start of the game, you locate (or hide) your four platoons on your grid. The computer does the same on its grid. You then take turns firing missiles or bombs at each other's outposts trying to destroy all four platoons. The one who finds all four opponents' platoons first, wins

This program was slightly modified from the original written by Martin Burdash of Parlin, New Jersey.

BOMBARONENT CREATIVE CONPUTING MORRISTOWM, NEW JERSEY

YOU ARE ON A BATTLEFIELD WITH 4 PLATOONS AMD YOU HAVE 25 OUTPOSTS AVAILABLE WHERE THEY MAY BE PLACED. YOU CAM ONLY PLACE ONE PLATOOM AT ANY ONE OUTPOST. THE CONPUTER DOES THE SANE WITH ITS FOUR PLATOOMS.

THE OBJECT OF THE GAME IS TO FIRE NISSILES AT THE OUTPOSTS OF THE COMPUTER. IT WILL OD THE SAME TO YOU. THE ONE WHO DESTROYS ALL FOUR OF THE EMENY'S PLATOONS FIRST IS THE WINNER.

GOOD LUCK... AND TELL US WHERE YOU WANT THE BOOIES SENT!

TEAR OFF MATRIX AMD USE IT TO CHECK OFF THE NUMBERS.

```

Bombs Away

In this program, you fly a World War II bomber for one of the four protagonists of the war. You then pick your target or the type of plane you are flying. Depending upon your flying experience and the quality of the enemy defenders, you then may accomplish your mission, get shot down, or make it back through enemy fire. In any case, you get a chance to fly again.

David Ahl modified the original program which was created by David Sherman while a student at Curtis Jr. High School, Sudbury, Massachusetts.

8008S AWAY
CREATIVE COMPUTING NORRISTOWN, NEW JERSEY

YOU ARE A PILOT IN A WORLD WAR II 8DNBER.
WHAT SIDE -- ITALY(1), ALLIES(2), JAPAN(3), GERNANY(4)? 2
AIRCRAFT -- LIBERATOR(1), 8-29(2), 8-17(3), LANCASTER(4)? 4

YOU'RE BUSTING A GERNAN NEAVY WATER PLANT IN THE RUNR.

HOW NANY NISSIONS HAVE YOU FLOWN? 25

DIRECT NIT!!!! 43 KILLED. NISSION SUCCESSFUL.

ANOTHER NISSION (Y OR N)? Y
YOU ARE A PILOT IN A WORLD WAR II BONBER.
WHAT SIDE -- ITALY(1), ALLIES(2), JAPAN(3), GERNANY(4)? 3
YOU'RE FLYING A KANIKAZE NISSION OVER THE USS LEXINGTON.
YOUR FIRST KANIKAZE NISSION(Y OR N)? Y

* * * * BOON * * * * *
YOU HAVE BEEN SHOT DOWN.....
DEARLY BELOVED, WE ARE GATHERED HERE TODAY TO PAY DUR
LAST TRIBUTE...

ANOTHER MISSION (Y OR N)? Y
YOU ARE A PILOT IN A WORLD WAR II BOMBER.
WHAT SIDE -- ITALY(1), ALLIES(2), JAPAN(3), GERNANY(4)? 1
YOUR TARGET -- ALBANIA(1), GREECE(2), NORTH AFRICA(3)? 1

SHOULD BE EASY -- YOU'RE FLYING A NAZI-NADE PLANE.

HOW MANY NISSIONS HAVE YOU FLOWN? 200 MISSIONS, NOT NILES... 150 HISSIONS IS HIGH EVEN FOR OLD-TIMERS. NOW THEN, HOW MANY HISSIONS HAVE YOU FLOWN? 20

Bounce

This program plots a bouncing ball. Most computer plots run along the paper in the terminal (top to bottom); however, this plot is drawn horizontally on the paper (left to right).

You may specify the initial velocity of the ball and the coefficient of elasticity of the ball (a superball is about 0.85—other balls are much less). You also specify the time increment to be used in "strobing" the flight of the ball. In other words, it is as though the ball is thrown up in a darkened room and you flash a light at fixed time intervals and photograph the progress of the ball.

The program was originally written by Val Skalabrin while he was at DEC.

BOUNCE CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

THIS SIMULATION LETS YOU SPECIFY THE INITIAL VELOCITY OF A BALL THROWN STRAIGHT UP, AND THE COEFFICIENT OF ELASTICITY OF THE BALL. PLEASE USE A DECIMAL FRACTION COEFFICIENCY (LESS THAN 1).

YOU ALSO SPECIFY THE TIME INCREMENT TO BE USED IN 'STROBING' THE BALL'S FLIGHT (TRY .1 INITIALLY).

TIME INCREMENT (SEC)? .1

VELOCITY (FPS)? 30

COEFFICIENT? .9

Bowling

This is a simulated bowling game for up to four players. You play 10 frames. To roll the ball, you simply type "ROLL." After each roll, the computer will show you a diagram of the remaining pins ("0" means the pin is down, "+" means it is still standing), and it will give you a roll analysis: **GUTTER** STRIKE SPARE ERROR (on second ball if pins still standing) Bowling was written by Paul Peraino while a student at Woodrow Wilson High School, San Francisco, California. BOWL CREATIVE COMPUTING MORRISTOWN, HEW JERSEY WELCONE TO THE ALLEY BRIHE YOUR FRIENDS OKAY LET'S FIRST GET ACQUAINTED THE INSTRUCTIONS (Y/N) THE GAME OF BOWLING TAKES SKILL. DURING THE GAME THE COMPUTER WILL KEEP SCORE. YOU MAY COMPETE WITH OTHER PLAYERSCUP TO FOURD. YOU WILL BE PLAYING TEN FRAMES ON THE PIH DIAGRAM 'O' HEANS THE PIH IS DOWH...'+' HEANS T PIH IS STAHDING.AFTER THE GAME THE COMPUTER WILL SHOW YOUR SCORES . FIRST OF ALL...HOW MANY ARE PLAYING? 2 VERY GOOD. . TYPE ROLL TO GET THE BALL GOING. ? ROLL PLAYER: 1 FRAME: 1 BALL: 1 0 0 0 + 0 + 0 0 0 TYPE ROLL TO GET THE BALL GOING. ? Boxing

This program simulates a threeround Olympic boxing match. The computer coaches one of the boxers and determines his punches and defenses, while you do the same for your boxer. At the start of the match, you may specify your man's best punch and his vulnerability.

There are approximately seven major punches per round, although this may be varied in Statement 185. The best two out of three rounds wins.

Jesse Lynch of St. Paul, Minnesota created this program.

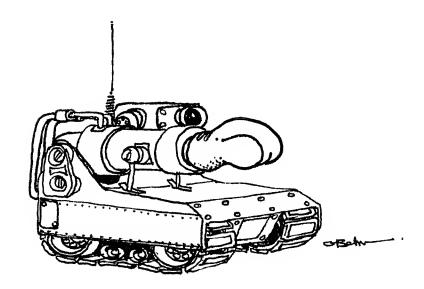

BOXING CREATIVE CONPUTING NORRISTOWN, NEW JERSEY

```
BOXING OLYMPIC STYLE (3 ROUNDS -- 2 DUT OF 3 WINS)
WHAT IS YOUR OPPONENT'S NAME? MEATHEAD
INPUT YOUR NAM'S NAME? SUPERNAM
DIFFERENT PUNCHES ARE 1 FULL SWING 2 NOOK 3 UPPERCUT 4 JAB
WHAT IS YOUR NAMS BEST? 3
WHAT IS HIS VULNERABILITY? 2
MEATHEAD'S ADVANTAGE IS 2 AND VULNERABILITY IS SECRET.
ROUND 1 BEGINS ...
SUPERNAN'S PUNCH? 1
SUPERNAN SWINGS AND NE CONNECTS!
SUPERNAN IS ATTACKED BY AN UPPERCUT (ON.DN)...
 AND NEATHEAD CONNECTS...
SUPERNAN'S PUNCH? 4
SUPERNAN JABS AT NEATHEAD'S NEAD SUPERNAN'S PUNCH! 3
SUPERNAN TRIES AN UPPERCUT
                                 AND IT'S BLOCKED (LUCKY BLOCK!)

The object of this game is to finish your drawing of a bug before the computer finishes.

You and the computer roll a die alternately with each number standing for a part of the bug. You must add the parts in the right order; in other words, you cannot have a neck until you have a body, you cannot have a head until you have a neck, and so on. After each new part has been added, you have the option of seeing pictures of the two bugs.

If you elect to see all the pictures, this program has the ability of consuming well over six feet of terminal paper per run. We can only suggest recycling the paper by using the other side.

Brian Leibowitz wrote this program while in the 7th grade at Harrison Jr-Sr High School in Harrison, New York.

BUG CREATIVE COMPUTING HORRISTOWN, NEW JERSEY

THE GAHE BUO

I HOPE YOU ENJOY THIS DAHE. DO YOU WANT INSTRUCTIONS? YES

THE OBJECT OF BUO IS TO FINISH YOUR BUO BEFORE I FIHISH MIHE. EACH HUNBER STANOS FOR A PART OF THE BUO BOOY. I WILL ROLL THE DIE FOR YOU, TELL YOU WHAT I ROLLEO FOR YOU WHAT THE NUMBER STAHOS FOR, AND IF YOU CAN DET THE PART.
IF YOU CAN GET THE PART I WILL GIVE IT TO YOU. THE SAME WILL NAPPEH ON MY TURN.

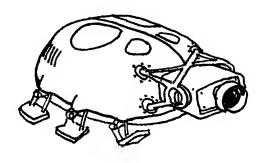

OPTION OF SEEING THE PICTURES OF THE BUGS.

THE NUMBERS STAND FOR PARTS AS FOLLOWS: HUNBER OF PART HEEDED HUMBER PART BODY

NECK HEAD **FEELERS** TAIL LE6S

YOU ROLLEO A 1 1=B00Y YOU HOW NAVE A BOOY. I ROLLEO A 4 4=FFFFFRS I DO HOT HAVE A HEAD. DO YOU WANT THE PICTURES? YES *****YOUR BUG****

Bullfight

In this simulated bullfight, you are the matador — i.e., the one with the principal role and the one who must kill the bull or be killed (or run from the ring).

On each pass of the bull, you may try:

- 0 Veronica (dangerous inside move of the cape)
- 1 Less dangerous outside move of the cape
- 2 Ordinary swirl of the cape Or you may try to kill the bull:
 - 4 Over the horns
 - 5 In the chest

The crowd will determine what award you deserve, posthumously if necessary. The braver you are, the better the award you receive. It's nice to stay alive too. The better the job the picadores and toreadores do, the better your chances.

David Sweet of Dartmouth wrote the original version of this program. It was then modified by students at Lexington High School and finally by Steve North of Creative Computing.

BULL CREATIVE COMPUTING HORRISTOWN, NEW JERSEY

DO YOU WAHT INSTRUCTIONS? YES HELLO, ALL YOU BLOODLOVERS AND AFICIONAGOS HERE IS YOUR BIG CHANCE TO KILL A BULL

OH EACH PASS OF THE BULL, YOU HAY TRY 0 - VEROHICA (DANGEROUS INSIDE HOVE OF THE CAPE) 1 - LESS DANGEROUS OUTSIDE HOVE OF THE CAPE

2 - ORDIHARY SWIRL OF THE CAPE

IHSTEAD OF THE ABOVE, YOU HAY TRY TO KILL THE BULL OH AHY TURH: 4 (OVER THE HORHS), 5 (IH THE CHEST) BUT IF I WERE YOU, I WOULDH'T TRY IT BEFORE THE SEVEHTH PASS.

THE CROWO WILL DETERHIHE WHAT AWARD YOU DESERVE POSTHUHOUSLY IF HECESSARY THE BRAVER YOU ARE, THE BETTER THE AWARD YOU RECEIVE

THE BETTER A JOB THE PICADORES AND TOREAGORES DO, THE BETTER YOUR CHANCES ARE

YOU HAVE DRAWH A POOR BULL.

THE PICADORES DIO A AWFUL JOB.

2 OF THE HORSES OF THE PICADORES KILLED.

1 OF THE PICADORES KILLED.

THE TOREAGORES DID A AWFUL JOB. 2 OF THE TOREAGORES KILLED.

PASS HUHBER 1
THE BULL IS CHARGING AT YOU! YOU ARE THE HATAOOR-OO YOU WANT TO KILL THE BULL? HO
WHAT HOVE DO YOU MAKE WITH THE CAPE? O

PASS HUHBER 2
THE BULL IS CHARGING AT YOU! YOU ARE THE HATAOOR-DO YOU WANT TO KILL THE BULL? HO
WHAT HOVE DO YOU HAKE WITH THE CAPE? 1

PASS HUMBER 3 HERE COMES THE BULL. TRY FOR A KILL? HO CAPE HOVE? 1

PASS HUHBER 4
HERE COHES THE BULL. TRY FOR A KILL? HO
CAPE HOVE? 0

PASS HUHBER 5 HERE COHES THE BULL. TRY FOR A KILL? HO CAPE HOVE? 2

PASS HUHBER 6 HERE COHES THE BULL. TRY FOR A KILL? NO CAPE HOVE? 1

PASS HUHBER 7 HERE COHES THE BULL. TRY FOR A KILL? HO CAPE HOVE? O

PASS HUMBER B
HERE COMES THE BULL. TRY FOR A KILL? YES
IT IS THE MOMENT OF TRUTH.
HOW DO YOU TRY TO KILL THE BULL? 5
THE BULL HAS GORED YOU
YOU ARE DEAD

THE CROUD AWARDS YOU OHE EAR OF TRE BULL

ADIOS

OO YOU WANT INSTRUCTIONS? HO

YOU HAVE DRAWH A SUPERB BULL. GOOD LUCK. YOU'LL HEED IT.

THE PICADORES DIO A SUPERB JOB.

THE TOREADORES DID A SUPERB JOB.

```

Bullseye

In this game, up to 20 players throw darts at a target with 10-, 20-, 30-, and 40-point zones. The objective is to get 200 points.

You have a choice of three methods of throwing:

01 11110	wing.	
Throw	Description	Probable Score
1	Fast overarm	Bullseye or complete miss
2	Controlled overarm	10, 20, or 30 points
3	Underarm	Anything
	will find after playing a v	

You will find after playing a while that different players will swear by different strategies. However, consider the expected score per throw by always using Throw 3 (program line 220):

Score (S)	Probability (P)	SxF
40	1.0095 = .05	2
30	.9575 = .20	6
30	.7545 = .30	6
10	.4505 = .40	4
0	.0500 = .05	0
Expected so	18	

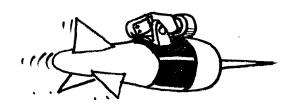

Calculate the expected scores for the other throws and you may be surprised!

The program was written by David Ahl of Creative Computing.

BULLSEYE CREATIVE CONPUTINO NORRISTOWN, NEW JERSEY

IN THIS GAME, UP TO 20 PLAYERS THROW DARTS AT A TARGET WITH 10, 20, 30, AND 40 POINT 20NES. THE OBJECTIVE IS TO GET 200 POINTS.

Buzzword

This program is an invaluable aid for preparing speeches and briefings about educational technology. This buzzword generator provides sets of three highly-acceptable words to work into your material. Your audience will never know that the phrases don't really mean much of anything because they sound so great! Full instructions for running are given in the program.

This version of Buzzword was written by David Ahl.

BUZZWORO GENERATOR
CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

THIS PROGRAM PRINTS HIGHLY ACCEPTABLE PHRASES IN 'EDUCATOR-SPEAK'THAT YOU CAN WORK INTO REPORTS AND SPEECHES. WHENEVER A DUESTION NARK IS PRINTED, TYPE A 'Y' FOR ANOTHER PHRASE OR 'N' TO OUIT.

HERE'S THE FIRST PHRASE:
ABILITY VERTICAL AGE PERFORMANCE

? Y OIFFERENTIATEO CREATIVE FACILITY

? Y MANIPULATIVE LEARNING ENVIRONMENT

? Y ABILITY CREATIVE GRDUPING

? Y TAVISTOCK NON-GRADED REINFORCEMENT

? Y MODULAR NDTIVATIONAL FACILITY

? Y TAVISTOCK HUNANISTIC REINFORCENENT

? Y DISCOVERY HOTIVATIONAL GROUPING

? Y HETEROGENEOUS VERTICAL AGE PROCESS

ABILITY LEARNING PROCESS

? Y
FLEXIBLE TRAINING CORE CURRICULUM
? N
COME BACK WHEN YOU NEED HELP WITH ANOTHER REPORT!

Calendar

This program prints out a calendar for any year. You must specify the starting day of the week of the year in Statement 130. (Sunday (0), Monday (-1), Tuesday (-2), etc.). You can determine this by using the program WEEK-DAY. You must also make two changes for leap years in Statements 360 and 620. The program listing describes the necessary changes. Running the program produces a nice 12-month calendar.

The program was written by Geoffrey Chase of the Abbey, Portsmouth, Rhode Island.

Change

In this program, the computer pretends it is the cashier at your friendly neighborhood candy store. You tell it the cost of the item(s) you are buying, the amount of your payment, and it will automatically (!) determine your correct change. Aren't machines wonderful? Dennis Lunder of People's Computer Company wrote this program.

CNANGE
CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

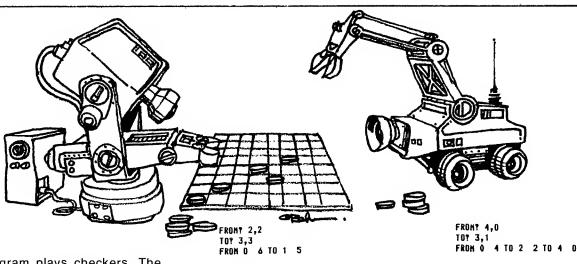

I, YOUR FRIENDLY MICROCONPUTER, WILL GETERNINE THE CORRECT CHANGE FOR ITEMS COSTING UP TO \$100.

This program plays checkers. The pieces played by the computer are marked with an "X", yours are marked "O". A move is made by specifying the coordinates of the piece to be moved (X, Y). Home (O,O) is in the bottom left and X specifies distance to the right of home (i.e., column) and Y specifies distance above home (i.e., row). You then specify where you wish to move to.

The original version of the program by Alan Segal was not able to recognize (or permit) a double or triple jump. If you tried one, it was likely that your piece would disappear altogether!

Steve North of Creative Computing rectified this problem and Lawrence Neal contributed modifications to allow the program to tell which player has won the game. The computer does not play a particularly good game but we leave it to you to improve that.

CHECKERS CREATIVE COMPUTING MORRISTOWM, MEW JERSEY

THIS IS THE DAME OF CNECKERS. THE COMPUTER IS \mathbf{x} , and you are o. The computer vill move first. SQUARES ARE REFERRED TO BY A COORDINATE SYSTEM. (Q,O) IS THE LOVER LEFT CORNER (0,7) IS THE UPPER LEFT CORNER (7,0) IS THE LOWER RIGHT CORNER (7,7) IS THE UPPER RIGHT CORNER THE COMPUTER WILL TYPE '+TO' WHEN YOU HAVE ANOTHER JUMP. TYPE TWO MEDATIVE MUMBERS IF YOU CAMMOT JUMP.

Chemist

The fictitious chemical, kryptocyanic acid, can only be diluted by the ratio of 7 parts water to 3 parts acid. Any other ratio causes an unstable compound which soon explodes. Given an amount of acid, you must determine how much water to add for dilution. If you're more than 5% off, you lose one of your nine lives. The program continues to play until you lose all nine lives or until it is interrupted.

It was originally written by Wayne Teeter of Ridgecrest, California.

CREATIVE CONPUTING NORRISTOWN, NEW JERSEY

THE FICTITIOUS CHENICAL KRYPTOCYANIC ACIO CAN ONLY BE OILUTED BY THE RATIO OF 7 PARTS WATER TD 3 PARTS ACIO. IF ANY OTHER RATIO IS ATTEMPTED, THE ACIO BECOMES UNSTABLE AND SOON EXPLODES. DIVEN THE ANOUNT OF ACIO, YOU HUST DECIDE NOW NUCH WATER TO AOD FOR DILUTION. IF YOU HISS YOU FACE THE CONSEQUENCES.

32 LITERS OF KRYPTOCYANIC ACIO. NOW NUCN WATER? 77 GDOO JOB! YOU NAY BREATNE NOW, BUT OOM'T INNALE THE FUNES!

11 LITERS OF KRYPTOCYANIC ACIO. NOW NUCN WATER? 27 SIZZLE! YOU NAVE JUST BEEN DESALINATED INTO A BLOB OF OUIVERING PROTOPLASN!

HOWEVER, YOU NAY TRY AGAIN WITH ANOTHER LIFE.
26 LITERS OF KRYPTOCYANIC ACIO. NOW NUCH WATER? 28
SIZZLE! YOU NAVE JUST BEEN DESALINATED INTO A BLOB
OF OUIVERING PROTOPLASN!

HOWEVER, YOU MAY TRY AGAIN WITH ANOTHER LIFE.

47 LITERS OF KRYPTOCYANIC ACIO. NOW MUCH WATER? 82
SIZZLE! YOU NAVE JUST BEEN DESALINATED INTO A BLOB
OF OUIVERING PROTOPLASNI

HOWEVER, YOU NAY TRY AGAIN WITH ANOTHER LIFE.
27 LITERS OF KRYPTOCYANIC ACIO. NOW NUCH WATER? 43
GOOD JOB! YOU NAY BREATNE NOW, BUT OON'T INNALE THE FUNES!

Chief

In the words of the program author, John Graham, "CHIEF is designed to give people (mostly kids) practice in the four operations (addition, multiplication, subtraction, and division).

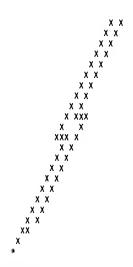

It does this while giving people some fun. And then, if the people are wrong, it shows them how they should have done it.

CHIEF was written by John Graham of Upper Brookville, New York.

Chomp

This program is an adaptation of a mathematical game originally described by Martin Gardner in the January 1973 issue of *Scientific American*. Up to a 9x9 grid is set up by you with the upper left square a poison square. This grid is the cookie. Players alternately chomp away at the cookie from the lower right. To take a chomp, input a row and column number of one of the squares remaining on the cookie. All of the squares below and to the right of that square, including that square, disappear.

Any number of people can play — the computer is only the moderator; it is not a player. Two-person strategies are interesting to work out but strategies when three or more people are playing are a real challenge.

The computer version of the game was written by Peter Sessions of People's Computer Company.

CNOMP
CREATIVE COMPUTINO MORRISTOWN, NEW JERSEY

THIS IS THE GAME OF CHOMP (SCIENTIFIC AMERICAN, JAN 1973)
WANT THE RULES (1=YES, 0=NO!)? 1
CHOMP IS FOR 1 OR NORE PLAYERS (NUMANS DNLY).

HERE'S NOW A 80ARO LOOKS (THIS ONE IS 5 BY 7):

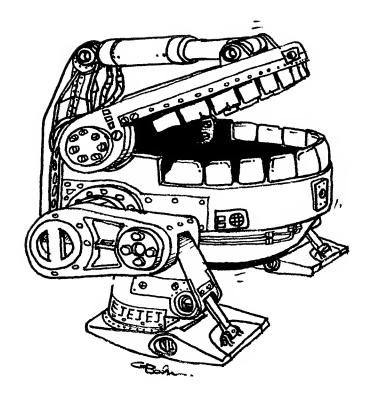

THE BOARD IS A BIG COOKIE - R ROWS NIGH AND C COLUNNS WIDE. YOU INPUT R AND C AT THE START. IN THE UPPER LEFT CORNER OF THE COOKIE IS A POISON SOUARE (P). THE ONE WHO CHOMPS THE POISON SOUARE LOSES. TO TAKE A CHOMP, TYPE THE ROW AND COLUNN OF OME OF THE SOUARES ON THE COOKIE. ALL OF THE SOUARES BELOW AND TO THE RIGHT OF THAT SOUARE (INCLUDING THAT SOUARE, TOO) DISAPPEAR -- CHOMPII NO FAIR CHOMPING SOUARES THAT NAVE ALREADY BEEN CHOMPED, OR THAT ARE OUTSIDE THE ORIGINAL DIMENSIONS OF THE CUOKIE.

NERE WE GO...

```
HOW MANY PLAYERS? 2
HOW MANY ROWS? 8
HOW MANY COLUNNS? 7
```

```

vil Wa

This simulation is based on 14 battles in the Civil War. Facts and figures used are based on the actual occurrence. If you follow the same strategy used in the actual battle, the results will be the same. Generally, this is a good strategy since the generals in the Civil War were fairly good military strategists. However, you can frequently outperform the Civil War generals, particularly in cases where they did not have good enemy intelligence and consequently followed a poor course of action. Naturally, it helps to know your Civil War history, although the computer gives you the rudiments.

After each of the 14 battles, your casualties are compared to the actual casualties of the battle, and you are told whether you win or lose the battle.

You may play Civil War alone in which case the program simulates the Union general. Or two players may play in which case the computer becomes the moderator.

Civil War was written in 1968 by three Students at Lexington High School, Massachusetts: L. Cram, L. Goodie, and D. Hibbard. It was modified into a 2-player game by G. Paul and R. Hess of TIES, St. Paul, Minnesota.

CIVIL WAR CREATIVE COMPUTING NORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES

THIS IS A CIVIL WAR SINULATION. TO PLAY, TYPE A RESPONSE WHEN THE COMPUTER ASKS.
RENEMBER THAT ALL FACTORS ARE INTERRELATED AND THAT YOUR
RESPONSES COULD CHANGE MISTORY. FACTS AND FIGURES USED ARE
BASED ON THE ACTUAL OCCURRENCE. NOST BATTLES TEND TO RESULT AS THEY DID IN THE CIVIL WAR. BUT IT ALL DEPENDS ON YOU!!

THE OBJECT OF THE GAME IS TO WIN AS MANY BATTLES AS POSSIBLE.

YOUR CHOICES FOR DEFENSIVE STRATEGY ARE:

- (1) ARTILLERY ATTACK
- (2) FORTIFICATION AGAINST FRONTAL ATTACK
- (3) FORTIFICATION AGAINST FLANKING MANEUVERS
- (4) FALLING BACK YOUR CHOICES FOR OFFENSIVE STRATEGY ARE:
 - (1) ARTILLERY ATTACK
 - (2) FRONTAL ATTACK
 - (3) FLANKING NAMEDUERS
 - (4) ENCIRCLEMENT

YOU MAY SURRENDER BY TYPING A '5' FOR YOUR STRATEGY.

ARE THERE TWO GENERALS PRESENT (ANSWER YES OR NO)? YES SELECT A BATTLE BY TYPING A NUMBER FROM 1 TO 14 ON REQUEST. TYPE ANY OTHER NUMBER TO END THE SINULATION. BUT 'O' BRINGS BACK EXACT PREVIOUS BATTLE SITUATION ALLOWING YOU TO REPLAY IT

NOTE: A NEGATIVE FOODS ENTRY CAUSES THE PROGRAM TO USE THE ENTRIES FROM THE PREVIOUS BATTLE

AFTER REDUESTING A BATTLE, DO YOU WISH BATTLE DESCRIPTIONS (ANSWER YES OR NO)? YES

Combat

In this game, you are fighting a small-scale war with the computer. You have 72,000 troops which you first must distribute among your Army, Navy, and Air Force. You may distribute them in any way you choose as long as you don't usé more than 72,000.

You then attack your opponent (the computer) and input which service and the number of men you wish to use. The computer then tells you the outcome of the battle, gives you the current statistics and allows you to determine your next move.

After the second battle, it is decided from the total statistics whether you win or lose or if a treaty is signed.

This program was created by Bob Dores of Milton, Massachusetts.

CONBAT CREATIVE CONPUTING MORRISTOWN, NEW JERSEY

I AN AT WAR WITH YOU. WE HAVE 72000 SOLOTERS APIECE. DISTRIBUTE YOUR FORCES.

	NE	YOU	
ARNY	30000	? 25000	
NAUY	20000	? 25000	
A.F.	22000	? 22000

Craps

This game simulates the game of craps played according to standard Nevada craps table rules. That is:

- 1. A 7 or 11 on the first roll wins
- 2. A 2, 3, or 12 on the first roll loses
- 3. Any other number rolled becomes your "point." You continue to roll; if you get your point, you win. If you roll a 7, you lose and the dice change hands when this happens.

This version of craps was modified by Steve North of Creative Computing. It is based on an original which appeared one day on a computer at DEC.

Cube

CUBE is a game played on the facing sides of a cube with a side dimension of 2. A location is designated by three numbers — e.g., 1, 2, 1. The object is to travel from 1, 1, 1 to 3, 3, 3 by moving one horizontal or vertical (not diagonal) square at a time without striking one of 5 randomly placed landmines. You are staked to \$500; prior to each play of the game you may make a wager whether you will reach your destination. You lose if you hit a mine or try to make an illegal move — i.e., change more than one digit from your previous position.

Cube was created by Jerimac Ratliff of Fort Worth, Texas.

CUBE CREATIVE CONPUTING NORRISTOWN, NEW JERSEY

DO YOU WANT TO SEE THE INSTRUCTIONS? (YES--1,NO--0)? 1
THIS IS A GANE IN WHICH YOU WILL BE PLAYING AGAINST THE RANDON DECISION OF THE CONPUTER. THE FIELD OF PLAY IS A CUBE OF SIDE 3. ANY OF THE 27 LOCATIONS CAN BE DESIGNATED BY INPUTING THREE NUMBERS SUCH AS 2,3,1. AT THE START, YOU ARE AUTOMATICALLY AT LOCATION 1,1,1. THE OBJECT OF THE GAME IS TO GET TO LOCATION 3,3,3. ONE MINOR DETAIL, THE COMPUTER WILL PICK, AT RANDON, 5 LOCATIONS AT WHICH IT WILL PLANT LAND NINES. IF YOU NIT ONE OF THESE LOCATIONS YOU LOSE. ONE OTHER DETAIL, YOU MAY NOVE ONLY ONE SPACE IN ONE DIRECTION EACH NOVE. FOR EXAMPLE: FRON 1,1,2 YOU NAY NOVE TO 2,1,2 OR 1,1,3. YOU NAY NOT CHANGE
TWO OF THE NUMBERS ON THE SAME NOVE. IF YOU NAKE AN ILLEGAL NOVE, YOU LOSE AND THE COMPUTER TAKES THE NOMEY YOU NAY NAVE BET ON THAT ROUND.

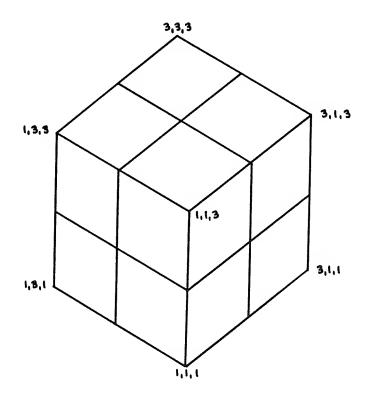

ALL YES OR NO OUESTIONS WILL BE ANSWERED BY A 1 FOR YES OR A 0 (ZERO) FOR NO.

WHEN STATING THE ANOUNT OF A WAGER, PRINT ONLY THE NUMBER OF OOLLARS (EXAMPLE: 250) YOU ARE AUTONATICALLY STARTED WITN 500 OOLLAR ACCOUNT.

GOOD LUCK
UANT TO NAKE A WAGER?

Depth Charge

In this program you are captain of the destroyer USS Computer. An enemy submarine has been causing trouble and your mission is to destroy it. You may select the size of the "cube" of water you wish to search in. The computer then determines how many depth charges you get to destroy the submarine.

Each depth charge is exploded by you specifying a trio of numbers; the first two are the surface coordinates (X,Y), the third is the depth. After each depth charge, your sonar observer will tell you where the explosion was relative to the submarine.

Dana Noftle wrote this program while a student at Acton High School, Acton, Massachusetts.

Diamond

This program fills an 8½ x11 piece of paper with diamonds (plotted on a hard-copy terminal, of course). The program asks for an odd number to be input in the range 5 to 31. The diamonds printed will be this number of characters high and wide. The number of diamonds across the page will vary from 12 for 5-character wide diamonds to 1 for a diamond 31-characters wide. You can change the content of the pattern if you wish in Statement 6.

The program was written by David Ahl of Creative Computing.

Dice

Not exactly a game, this program simulates rolling a pair of dice a large number of times and prints out the frequency distribution. You simply input the number of rolls. It is interesting to see how many rolls are necessary to approach the theoretical distribution:

2	1/36	2.7777%
3	2/36	5.5555%
4	3/36	8.3333%
6	etc.	

Daniel Freidus wrote this program while in the seventh grade at Harrison Jr-Sr High School, Harrison, New York.

Digits

The player writes down a set of 30 numbers (0, 1, or 2) at random prior to playing the game. The computer program, using pattern recognition techniques, attempts to guess the next number in your list.

The computer asks for 10 numbers at a time. It always guesses first and then examines the next number to see if it guessed correctly. By pure luck (or chance or probability), the computer ought to be right 10 times. It is uncanny how much better it generally does than that!

This program originated at Dartmouth; original author unknown.

OIGITS

Even Wins

This is a game between you and the computer. To play, an odd number of objects (marbles, chips, matches) are placed in a row. You take turns with the computer picking up between one and four objects each turn. The game ends when there are no objects left, and the winner is the one with an even number of objects picked up.

Two versions of this game are included. While to the player they appear similar, the programming approach is quite different. EVEN WINS, the first version, is deterministic — i.e., the computer plays by fixed, good rules and is impossible to beat if you don't know how to play the game. It always starts with 27 objects, although you may change this in Lines 250, and 1060.

The second version, GAME OF EVEN WINS, is much more interesting because the computer starts out only knowing the rules of the game. Using simple techniques of artificial intelligence (cybernetics), the computer gradually learns to play from its mistakes until it plays a very good game. After 20 games, the computer is a challenge to beat. Variation in the human's style of play seems to make the computer learn more quickly. If you plot the learning curve of this program, it closely resembles classical human learning curves from psychological experiments.

Eric Peters at DEC wrote the GAME OF EVEN WINS. The original author of EVEN WINS is unknown.

EVEN WINS
CREATIVE COMPUTIND HORRISTOWN, HEW JERSEY

THIS IS A TWO PERSON GAME CALLED 'EVEN WIMS.'
TO PLAY THE GAME, THE PLAYERS MEED 27 MARBLES OR
OTHER OBJECTS ON A TABLE.

THE 2 PLAYERS ALTERNATE TURMS, WITH EACH PLAYER REMOVIND FROM 1 TO 4 MARBLES ON EACH HOVE. THE GAME ENDS WHEN THERE ARE NO MARBLES LEFT, AND THE WIMNER IS THE ONE WITH AN EVEN NUMBER OF MARBLES.

THE OHLY RULES ARE THAT (1) YOU MUST ALTERNATE TURMS, (2) YOU MUST TAKE BETWEEN 1 AND 4 MARBLES EACH TURM, AND (3) YOU CANNOT SKIP A TURM.

Flip Flop

The object of this game is to change a row of ten X's

to a row of ten 0's:

0000000000

by typing in a number corresponding to the position of an "X" in the line. On some numbers one position will change while on other numbers, two will change. For example, inputting a 3 may reverse the X and 0 in position 3, but it might possibly reverse some other position too! You ought to be able to change all 10 in 12 or fewer moves. Can you figure out a good winning strategy?

To reset the line to all X's (same game), type 0 (zero). To start a new

game at any point, type 11.

The original author of this game was Michael Kass of New Hyde Park, New York

FLIPFLOP CREATIVE COMPUTING NORRISTOWN, NEW JERSEY

THE OBJECT OF THIS PUZZLE IS TO CHANGE THIS:

TO THIS:

BY TYPING THE NUMBER CORRESPONDING TO THE POSITION OF THE LETTER ON SOME NUMBERS, ONE POSITION WILL CHANGE, ON OTHERS, TWO WILL CHANGE. TO RESET LINE TO ALL X'S, TYPE O (ZERO) AND TO START OVER IN THE NIDOLE OF A GAME, TYPE 11 (ELEVÉN).

HERE IS THE STARTING LINE OF X'S.

1 2 3 4 5 6 7 8 9 10 **x x x x x x x x x** x INPUT THE NUMBER? 2 1 2 3 4 5 6 7 B 9 10 X 0 X X X X X X 0 X X INPUT THE NUMBER? 3 1 2 3 4 5 6 7 8 9 10 X 0 0 X X X 0 0 X X INPUT THE NUMBER? 4 1 2 3 4 5 6 7 8 9 10 X 0 0 0 X X 0 0 X X INPUT THE NUMBERT 5 1 2 3 4 5 6 7 8 9 10 X O O O O X O O X X INPUT THE NUMBER? 9 1 2 3 4 5 6 7 B 9 10 X 0 0 0 X X 0 0 0 X INPUT THE NUMBERT 1 1 2 3 4 5 6 7 8 9 10 0 0 0 0 X X 0 0 0 X INPUT THE NUMBER? 5 1 2 3 4 5 6 7 8 9 10 $\ \ \, 0\ \ \, 0\ \ \, 0\ \ \, 0\ \ \, 0\ \ \, X$ INPUT THE NUMBER? 10 1 2 3 4 5 6 7 8 9 10 0 0 0 0 0 0 0 0 0 0 VERY GOOD. Football

Football is probably the most popular simulated sports game. I have seen some people elect to play computerized football in preference to watching a bowl game on television.

Two versions of football are presented. The first is somewhat more "traditional" in that you, the player, are playing against the computer. You have a choice of seven offensive plays. On defense the computer seems to play a zone defense, but you have no choice of plays. The computer program presents the necessary rules as you play, and it is also the referee and determines penalties when an infraction is committed. FTBALL was written by John Kemeny at Dartmouth.

In the second version of football, the computer referees a game played between two human players. Each player gets a list of twenty plays with a code value for one. This list should be kept confidential from your opponent. The codes can be changed in data statements 1770 for Team 1 and 1780 for Team 2. All twenty plays are offensive, a defensive play is specified by defending against a type of offensive play. A defense is good for other similar types of plays, for example, a defense against a flare pass is very good against a screen pass but much less good against a half-back option.

This game was originally written by Raymond Miseyka of Butler, Pennsylvania.

FOOTBALL CREATIVE COMPUTING MORRISTUUM, NEW JERSEY

PRESENTING N.F.U. FOOTBALL (NO FORTRAN USED)

00 YOU WANT INSTRUCTIONS? YES THIS IS A GAME FOR TWO TEAMS IN WHICK PLAYERS MUST PREPARE A TAPE WITH A DATA STATEMENT (1770 FOR TEAM 1, 17BO FOR TEAM 2) IN WHICH EACH TEAM SCRAMBLES NUS. 1-20 THESE NUMBERS ARE THEN ASSIGNED TO 20 GIVEN PLAYS. A LIST OF NOS. AND THEIR PLAYS ARE PROVIDED WITH BOTH TEAMS HAVING THE SAME PLAYS. THE MORE SIMILAR THE PLAYS THE LESS YAROAGE GAINED. SCORES ARE GIVEN WHENEVER SCORES ARE MADE. SCORES MAY ALSU BE OBTAINED BY INPUTTING 99,99 FOR PLAY NOS. TO PUNT OR ATTEMPT A FIELDGOAL, INPUT 77,77 FOR PLAY NOS. OUESTIUMS WILL BE ASKED THEN. ON 4TH OOWN YOU WILL ALSO BE ASKED WHETHER YOU WANT TO PUNT OR ATTEMPT A FIELD GOAL. IF THE ANSWER TO BOTH QUESTIONS IS NO IT WILL BE ASSUMED YOU WANT TO TRY AND GAIN YARDAGE. ANSWER ALL DUESTIONS YES OR NU. THE GAME IS PLAYED UNTIL PLAYERS TERMINATE (CONTROL-C). PLEASE PREPARE A TAPE AND RUN.

Fur Trader

You are the leader of a French fur trading expedition in 1776 leaving the Ontario area to sell furs and get supplies for the next year. You have a choice of three forts at which you may trade. The cost of supplies and the amount you receive for your furs will depend upon the fort you choose. You also specify what types of furs that you have to trade.

The game goes on and on until you elect to trade no longer.

Author of the program is Dan Bachor, University of Calgary, Alberta, Canada.

FUR TRACER
CREATIVE CONPUTING NORRISTOWN, NEW JERSEY

YOU ARE THE LEADER OF A FRENCH FUR TRADING EXPEDITION IN 1774 LEAVING THE LAKE ONTARIO AREA TO SELL FURS AND GET SUPPLIES FOR THE NEXT YEAR. YOU HAVE A CHOICE OF THREE FORTS AT WHICH YOU MAY TRADE. THE COST OF SUPPLIES AND THE ANOUNT YOU RECEIVE FOR YOUR FURS WILL DEPEND ON THE FORT THAT YOU CHOOSE.

OD YOU WISH TO TRADE FURS?
ANSWER YES OR NO ? YES

YOU HAVE \$ 600 SAVINGS.
AND 190 FURS TO BEGIN THE EXPEDITION.

YOUR 190 FURS ARE DISTRIBUTED ANONG THE FOLLOWING KINDS OF PELTS: NINK, BEAVER, ERNINE AND FOX.

HOW MANY MINK PELTS OO YOU HAVE? 40

HOW MANY BEAVER PELTS DO YOU HAVE? 50

HOW NANY ERNINE PELTS OD YOU HAVE? 60

HOW MANY FOX PELTS OD YOU HAVE? 40
OO YOU WANT TO TRADE YOUR FURS AT FORT 1, FORT 2,
OR FORT 3? FORT 1 IS FORT HOCHELAGA (MONTREAL)
AND IS UNDER THE PROTECTION OF THE FRENCH ARNY.
FORT 2 IS FORT STADACONA (OUEBEC) AND IS UNDER THE
PROTECTION OF THE FRENCH ARNY. HOWEVER, YOU MUST
NAKE A PORTAGE AND CROSS THE LACHINE RAPIDS.
FORT 3 IS FORT NEW YORK AND IS UNDER DUTCH CONTROL.
YOU NUST CROSS THROUGH IRODUOIS LAND.
ANSWER 1, 2, OR 3.

YOU HAVE CHOSEN THE NOST DIFFICULT ROUTE. AT FORT NEW YORK YOU WILL RECEIVE THE HIGHEST VALUE FOR YOUR FURS. THE COST OF YOUR SUPPLIES WILL BE LOWER THAN AT ALL THE OTHER FORTS. OO YOU WANT TO TRADE AT ANOTHER FORT? ANSWER YES OR NO ? YES ANSWER 1, 2, OR 3.

YOU HAVE CHOSEN A HARO ROUTE. IT IS, IN COMPARSION, HARDER THAN THE ROUTE TO HOCHELAGA BUT EASIER THAN THE ROUTE TO NEW YORK. YOU WILL RECEIVE AN AVERAGE VALUE FOR YOUR FURS AND THE COST OF YOUR SUPPLIES WILL BE AVERAGE OO YOU WANT TO TRADE AT ANOTHER FORT?

ANSWER YES OR NO ? NO ? NO

YOUR CANDE UPSET IN THE LACHINE RAPIOS. YOU LOST ALL YOUR FURS
SUPPLIES AT FORT STADACONA COST \$125.00
YOUR TRAVEL EXPENSES TO STADACONA WERE \$15.00

YOU NOW HAVE \$ 460 INCLUDING YOUR PREVIOUS SAVINGS

OO YOU WANT TO TRACE FURS NEXT YEAR?
ANSWER YES OR NO ? YES

YOU HAVE \$ 460 SAVINGS.
AND 190 FURS TO BEGIN THE EXPEDITION.

YOUR 190 FURS ARE DISTRIBUTED ANONG THE FOLLOWING KINDS OF PELTS: NINK, BEAVER, ERNINE AND FOX.

HOW NANY MINK PELTS OD YOU HAVE? 50

HOW NANY BEAVER PELTS OF YOU HAVE? 100

HOW MANY ERNINE PELTS DO YOU HAVE? 20

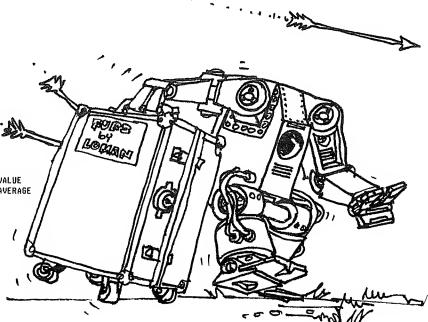

HOW NANY FOX PELTS DO YOU HAVE? 20
OO YOU WANT TO TRACE YOUR FURS AT FORT 1, FORT 2,
OR FORT 3? FORT 1 IS FORT HOCHELAGA (MONTREAL)
AND IS UNDER THE PROTECTION OF THE FRENCH ARMY.
FORT 2 IS FORT STACACOMA (OUEBEC) AND IS UNDER THE
PROTECTION OF THE FRENCH ARMY. HOWEVER, YOU NUST
MAKE A PORTAGE AND CROSS THE LACHINE RAPIDS.
FORT 3 IS FORT NEW YORK AND IS UNDER OUTCH CONTROL.
YOU NUST CROSS THROUGH IRODUOIS LAND.
ANSWER 1, 2, OR 3.

YOU HAVE CHOSEN THE MOST DIFFICULT ROUTE. AT FORT NEW YORK YOU WILL RECEIVE THE HIGHEST VALUE FOR YOUR FURS. THE COST OF YOUR SUPPLIES WILL BE LOWER THAN AT ALL THE OTHER FORTS. OD YOU WANT TO TRADE AT ANOTHER FORT? ANSWER YES OR NO ? NO

YOU NARROWLY ESCAPED AN IRODUDIS RAIDING PARTY. HOWEVER, YOU HAD TO LEAVE ALL YOUR FURS BEHIND. SUPPLIES AT NEW YORK COST \$BO.OD YOUR TRAVEL EXPENSES TO NEW YORK WERE \$25.00

YOU NOW HAVE \$ 355 INCLUDING YOUR PREVIOUS SAVINGS

OO YOU WANT TO TRACE FURS NEXT YEAR?
ANSWER YES OR NO ? NO

This is a single player golf game. In other words it's you against the golfcourse (the computer). The program asks for your handicap (maximum of 30) and your area of difficulty. You have a full bag of 29 clubs plus a putter. On the course you have to contend with rough, trees, on and off fairway, sand traps, and water hazards. In addition, you can hook, slice, go out of bounds, or hit too far. On putting, you determine the potency factor (or percent of swing). Until you get the swing of the game (no pun intended), you'll probably want to use a fairly high handicap.

Steve North of Creative Computing modified the original version of this game, the author of which is unknown.

Gomoko

GOMOKO or GOMOKU is a traditional game of the Orient. It is played by two people on a board of intersecting lines (19 left-to-right lines, 19 top-to-bottom lines, 361 intersections in all). Players take turns. During his turn, a player may cover one intersection with a marker; (one player uses white markers; the other player uses black markers). The object of the game is to get five adjacent markers in a row, horizontally, vertically or along either diagonal.

Unfortunately, this program does not make the computer a very good player. It does not know when you are about to win or even who has won. But some of its moves may surprise you.

The original author of this program is Peter Sessions of People's Computer Company.

GONOKO CREATIVE COMPUTING NORRISTOWN, NEW JERSEY

WELCONE TO THE ORIENTAL GAME OF GONOKO.

THE DAME IS PLAYED ON AN N BY N GRID OF A SIZE THAT YOU SPECIFY. DURING YOUR PLAY, YOU NAY COVER ONE GRID INTERSECTION WITH A NARKER. THE OBJECT OF THE GAME IS TO GET 5 ADJACENT NARKERS IN A ROW -- NORIZONTALLY, VERTICALLY, OR DIAGONALLY. ON THE BOARD DIAGRAM, YOUR NOVES ARE NARKED WITH A '1' AND THE COMPUTER NOVES WITH A '2'.

THE COMPUTER COES NOT KEEP TRACK OF UND HAS WON. TO END THE CAME, TYPE -1,-1 FOR YOUR NOVE.

WHAT IS YOUR BOARD SIZE (NIN 7/ HAX 19)? 10

WE ALTERNATE MOVES. YOU GO FIRST...

In Program GUESS, the computer chooses a random integer between 0 and any limit you set. You must then try to guess the number the computer has chosen using the clues provided by the computer.

You should be able to guess the number in one less than the number of digits needed to represent the number in binary notation — i.e., in base 2. This ought to give you a clue as to the optimum search technique.

GUESS converted from the original program in FOCAL which appeared in the book "Computers in the Classroom" by Walt Koetke of Lexington High School, Lexington, Massachusetts.

Gunner

GUNNER allows you to adjust the fire of a field artillery weapon to hit a stationary target. You specify the number of degrees of elevation of your weapon; 45 degrees provides maximum range with values under or over 45 degrees providing less range.

You get up to five shots to destroy the enemy before he destroys you. Gun range varies between 20,000 and 60,000 yards and burst radius is 100 yards. You must specify elevation within approximately 0.2 degrees to get a hit.

Tom Kloos of the Oregon Museum of Science and Industry in Portland, Oregon originally wrote GUNNER. Extensive modifications were added by David Ahl.

OK. RETURN TO BASE CAMP.

Hammurabi

In this game you direct the administrator of Sumeria, Hammurabi, how to manage the city. The city initially has 1,000 acres, 100 people and 3,000 bushels of grain in storage.

You may buy and sell land with your neighboring city-states for bushels of grain — the price will vary between 17 and 26 bushels per acre. You also must use grain to feed your people and as seed to plant the next year's crop.

You will quickly find that a certain number of people can only tend a certain amount of land and that people starve if they are not fed enough. You also have the unexpected to contend with such as a plague, rats destroying stored grain, and variable harvests.

You will also find that managing just the few resources in this game is not a trivial job over a period of say ten years. The crisis of population density rears its head very rapidly.

This program was originally written in Focal at DEC; author unknown. David Ahl converted it to BASIC and added the 10-year performance accessment. If you wish to change any of the factors, the extensive remarks in the program should make modification fairly straightforward.

Note for trivia buffs: somewhere along the line an m was dropped out of the spelling of Hammurabi in the Ahl version of the computer program. This error has spread far and wide until a generation of students who have used this program now think that Hammurabi is the incorrect spelling.

YDU NARVESTED 1 BUSHELS PER ACRE.
RATS ATE D BUSHELS.
YDU HDW HAVE 319 BUSHELS IH STORE.

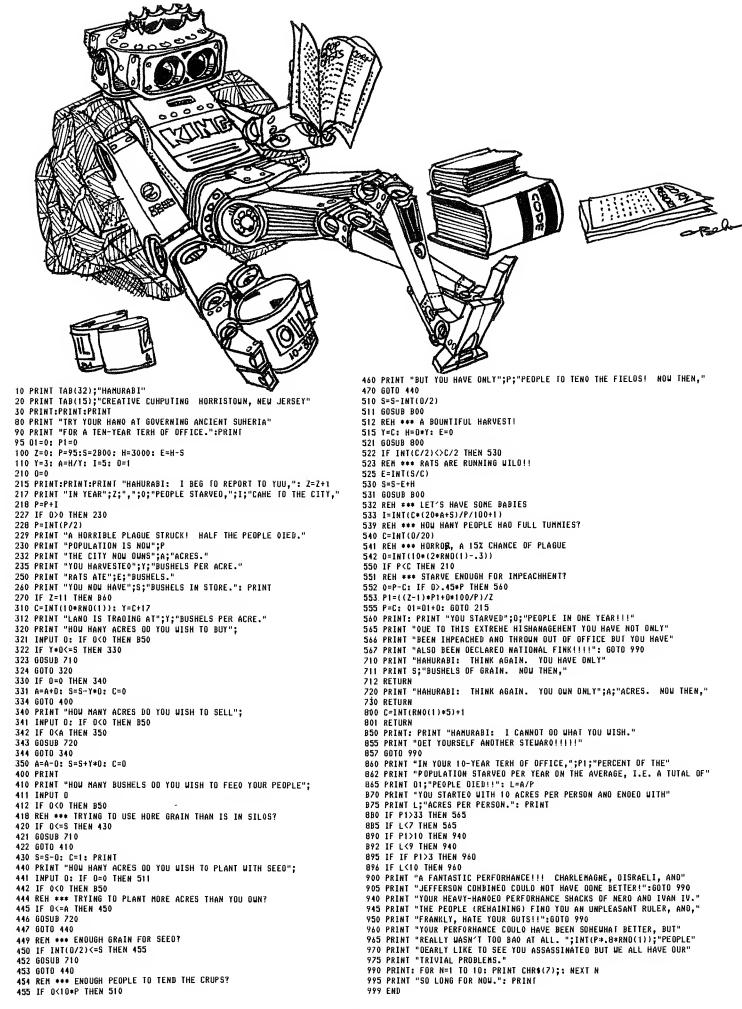

LAHD IS TRADING AT 23 BUSHELS PER ACRE. HDW NAHY ACRES DD YDU WISH TD BUY? O NOW NAMY ACRES DD YDU WISH TD SELL? 5DD

HOW HAHY BUSNELS DO YDU WISH TO FEED YDUR PEDPLE? 5DD

HOW NANY ACRES DO YOU WISH TO PLANT WITH SEED? 230

YOU STARVED 37 PEDPLE IN ONE YEAR!!!
DUE TO THIS EXTRENE HISHANAGENEHT YOU NAVE NOT ONLY
BEEN INPEACHED AND THROWN DUT OF OFFICE BUT YOU HAVE
ALSD BEEH DECLARED NATIONAL FINK!!!!

SO LONG FOR NOW.

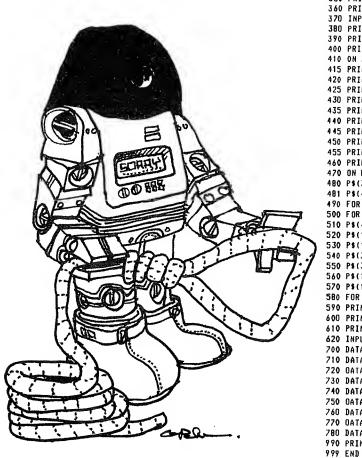

Hangman

This is a simulation of the word guessing game, hangman. The computer picks a word, tells you how many letters in the word it has picked and then you guess a letter in the word. If you are right, the computer tells you where that letter belongs; if your letter is wrong, the computer starts to hang you. You get ten guesses before you are completely hanged:

Head Body Right and Left Arms Right and Left Legs Right and Left Hands Right and Left Feet

You may add words in Data statements following Statement 508; however, if you do, you must also change the random word selector in Statement 40.

David Ahl modified this program into its current form from one created by Kenneth Aupperle of Melville, New York.

WHAT IS YOUR GUESS? R

Hello

This is a sample of one of a great number of conversational programs. In a sense, it is like a CAI program except that its responses are just good fun. Whenever a computer is exhibited at a convention or conference with people that have not used a computer before, the conversational programs seem to get the first activity.

In this particular program, the computer dispenses advice on various problems such as sex, health, money, or job.

David Ahl is the author of HELLO.

MELLO CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

HELLO. NY MAME IS CREATIVE COMPUTER.

WNAT'S YOUR NAME? MEAN MR. NUSTARO

NI THERE, NEAM NR. MUSTARO, ARE YOU ENJOYING YOURSELF MERE? NO

OH, I'N SORRY TO MEAR TNAT, NEAN MR. MUSTARO, NAYBE WE CAN BRIGHTEN UP YOUR VISIT A BIT.

SAY, MEAN NR. MUSTARO, I CAN SOLVE ALL KINOS OF PROBLEMS EXCEPT THOSE DEALINO WITH GREECE. WHAT KINO OF PROBLEMS OO YOU NAVE (ANSWER SEX, MEALTH, HOMEY, OR JOB)? NOMEY SORRY, NEAN NR. HUSTARO, I'M BROKE TOO. WHY OON'T YOU SELL EMCYCLOPAEOIAS OR MARRY SONEONE RICH OR STOP EATING SO YOU WON'T MEEO SO MUCH MONEY?

ANY NORE PROBLEMS YOU WANT SOLVED, NEAN NR. NUSTARO? YES

WHAT KINO (SEX, MOMEY, NEALTH, JOB)? SEX
IS YOUR PROBLEM TOO MUCH OR TOO LITTLE? TOO NUCH

YOU CALL THAT A PROBLEM?!! I SHOULD MAVE SUCH PROBLEMS!
IF IT BOTHERS YOU, NEAN MR. NUSTARO, TAKE A COLO SNOWER.

AMY MORE PROBLEMS YOU WANT SOLVED, NEAN MR. MUSTARO? YES

WHAT KINO (SEX, MOMEY, MEALTH, JOB)? JOB I CAN SYMPATHIZE WITN YOU MEAN NR. NUSTARO. I HAVE TO WORK VERY LOMG MOURS FOR MO PAY -- ANO SONE OF NY BOSSES REALLY BEAT OM MY KEYBOARO. NY AOVICE TO YOU, NEAN NR. NUSTARO, IS TO OPEN A RETAIL COMPUTER STORE. IT'S GREAT FUN.

ANY MORE PROBLEMS YOU WANT SOLVED, MEAN MR. MUSTARD? YES

WHAT KIND (SEX, MONEY, HEALTH, JOB)? NEALTH NY AOVICE TO YOU MEAH NR. NUSTARO IS:

- 1. TAKE TWO ASPIRIN
- 2. ORINK PLENTY OF FLUIOS (ORANGE JUICE, NOT BEER!)
- 3. GO TO BEO (ALONE)

ANY NORE PROBLEMS YOU WANT SOLVEO, MEAN NR. NUSTARO? NOT REALLY

JUST A SINPLE 'YES' OR 'HO' PLEASE, NEAN NR. NUSTARO. AMY HORE PROBLEMS YOU WANT SOLVEO, NEAN NR. MUSTARO? NO

THAT WILL BE \$5.00 FOR THE AOVICE, NEAN HR. HUSTARD. PLEASE LEAVE THE HONEY ON THE TERNINAL.

DIO YOU LEAVE THE NONEY? NO

TNAT'S HOMEST, NEAN NR. NUSTARO, BUT NOW OD YOU EXPECT NE TO GO ON WITH MY PSYCHOLOGY STUDIES IF NY PATIENTS OON'T PAY TNEIR BILLS?

Hexapawn

The game of Hexapawn and a method to learn a strategy for playing the game was described in Martin Gardner's "Mathematical Games" column in the March 1962 issue of Scientific American. The method described in the article was for a hypothetical learning machine composed of match boxes and colored beads. This has been generalized in the

program HEX.

The program learns by elimination of bad moves. All positions encountered by the program and acceptable moves from them are stored in the array P\$ (I). When the program encounters an unfamiliar position, the position and all legal moves from it are added to the list. If the program loses a game, it erases the move that led to defeat. If it hits a position from which all moves have been deleted (they all led to defeat), it erases the move that got it there and resigns. Eventually, the program learns to play extremely well and, indeed, is unbeatable. The learning strategy could be adopted to other simple games with a finite number of moves (tic-tac-toe, small board checkers, or other chess-based games).

The original version of this program was written by R.A. Kaapke. It was subsequently modified by Jeff Dalton and finally by Steve North of Creative Computing.

NEXAPAUN CREATIVE CONPUTINO NORRISTOUN, NEW JERSEY

INSTRUCTIONS (Y-H)? YES

THIS PROORAN PLAYS THE GANE OF HEXAPAUN.

NEXAPAUN IS PLAYED WITH CNESS PAUNS ON A 3 BY 3 BOARO.

THE PAUNS ARE MOVED AS IN CHESS - DHE SPACE FORWARD TO AN ENPTY SPACE OR ONE SPACE FORWARD AND DIAGONALLY TO CAPTURE AH OPPOSING NAN. ON THE BOARD, YOUR PAUNS ARE 'O', THE CONPUTER'S PAUNS ARE 'X', AND ENPTY SQUARES ARE '.'. TO EHTER A NOVE, TYPE THE NUMBER OF THE SOUARE YOU ARE NOVING FRON, FOLLOWED BY THE NUMBER OF THE SOUARE YOU WILL MOVE TO. THE NUMBERS MUST BE SEPARATED BY A COMMA.

THE COMPUTER STARTS A SERIES OF DAMES KNOWIND ONLY WHEN THE DAME IS WON (A DRAW IS INPOSSIBLE) AND NOW TO MOVE. IT WAS HO STRATEGY AT FIRST AND JUST NOVES RANDONLY. HOWEVER, IT LEARNS FROM EACH GAME. THUS, WINNIND BECOMES MORE AHD NORE DIFFICULT. ALSO, TO HELP OFFSET YOUR INITIAL ADVANTAGE, YOU WILL NOT BE TOLD HOW TO WIN THE GAME BUT NUST LEARN THIS BY PLAYING.

```
THE HUNDERING OF THE BOARD IS AS FOLLOWS:
            123
            456
            789
FOR EXAMPLE, TO NOVE YOUR RIONTHOST PAWN FORWARD, YOU WOULD TYPE 9,6 IH RESPONSE TO THE OUESTION 'YOUR NOVE T'. SINCE I'N A GOOD SPORT, YOU'LL ALWAYS
GO FIRST.

Hi-Lo

This game is an adaptation of the game GUESS; however, instead of just guessing a number between 1 and 100, in this game you win dollars when you guess the number. The directions, in the words of the author of the game, are as follows:

- 1. There is an amount of money, between one and one hundred dollars, in the "HI-LO" jackpot.
- You will have six chances in which to guess the amount of money in the jackpot.
- After each guess, the computer will tell whether the guess was too high or too low.
- If the correct amount of money is not guessed after six chances, the computer will print the amount in the jackpot.
- If the correct amount of money is guessed within the six chance limit, the computer will register this amount.
- After each sequence of guesses, you have the choice of playing again or ending the program. If a new game is played, a new amount of money will constitute the jackpot.
- 7. If you win more than once, then your earnings are totalled.

The author is Dean Altman of Fort Worth, Texas.

THIS IS THE GAME OF HI LO.

YOU WILL HAVE 6 TRIES TO GUESS THE AMOUNT OF MONEY IN THE NI LO JACKPOT, WHICH IS BETWEEN 1 AND 100 DOLLARS. IF YOU GUESS THE AMOUNT, YOU WIN ALL THE MONEY IN THE JACKPOT! THEN YOU GET ANOTHER CHANCE TO WIN HORE HONEY. NOWEVER, IF YOU DO NOT OUESS THE AMOUNT, THE OAKE ENOS.

YOUR GUESS? 50 YOUR GUESS IS TOO NIGN

YOUR GUESS? 25 YOUR GUESS IS TOO NIGH

YOUR GUESS? 12 YOUR GUESS IS TOO NIGH

YOUR OUESS? 4 YOUR GUESS IS TOO HIGH

YOUR GUESS? 3

YOUR BUESS IS TOO LOW

YOUR OUESS? 4
GOT IT!!!!!!!!!! YOU WIN 4 OOLLARS.
YOUR TOTAL WINNINGS ARE NOW 4 OOLLARS.

PLAY AGAIN (YES OR NO)? YES

YOUR GUESS? 50 YOUR GUESS IS TOO LOW

YOUR GUESS? 75

YOUR GUESS IS TOO HIGH

YOUR GUESS? 62 YOUR GUESS IS FOO HIGH

YOUR GUESS? 57
GOT IT!!!!!!!!!! YOU WIN 57 OOLLARS.
YOUR TOTAL WINNINGS ARE NOW 61 OOLLARS.

PLAY AGAIN (YES OR NO)? NO

SO LONG. HOPE YOU ENJOYED YOURSELF!!!

High I-Q

This is a computerized version of an old European solitaire game of logic. The game starts with a pegboard shaped like a cross having pegs in every hole but the center. The object is to remove all 32 pegs, or as many as possible, by jumping into an empty hole, then removing the jumped peg.

There are several different winning strategies for playing and, of course, each strategy can be played eight different ways on the board. Can you find a consistent winner?

Charles Lund wrote this game while at The American School in The Hague, Netherlands.

CREATIVE COMPUTING MORRISTOWN, NEW JERSEY HERE IS THE BOARD:

		1 13	! 14	1 15		
		1 22	1 23	1 24		
1 29	1 30	1 31	! 3 2	! 33	!. 34	! 35
1 3 B	! 39	! 40	! 41	! 42	1 43	! 44
i 47	! 48	! 49	! 50	! 51	! 52	! 53
		! 5B	! 59	60		
		1 67	1 6B	! 69		

TO SAVE TYPING TIHE, A CONPRESSED VERSIOH OF THE GAHE BOARD WILL BE USED OURING PLAY. REFER TO THE ABOVE ONE FOR PEG HUNBERS. OK, LET'S BEGIN.

Hockey

This is a simulation of a ice hockey game. The computer, in this case, moderates and referees the play between two human opponents. Of course, one person could play both sides.

The program asks for team names, player names, and even the name of the referee. Four types of shot are permitted and a shot may be aimed at one of four areas. You are also asked about passing. The game is very comprehensive with lots of action, face offs, blocks, passes, 4 on 2 situations, and so on. Unfortunately there are no penalties.

The original author is Robert Puopolo; modifications by Steve North of Creative Computing.

HOCKEY
CREATIVE COMPUTINO NORRISTOWN, NEW JERSEY

WOULD YOU LIKE THE INSTRUCTIONS? YES

THIS IS A SINULATED NOCKEY GAME. **OUESTION** RESPONSE TYPE IN THE NUMBER OF PASSES YOU WOULD PASS. LIKE TO MAKE, FROM 0 TO 3. TYPE THE NUMBER CORRESPONDING TO THE SMOT SHOT YOU WANT TO MAKE. EHTER: 1 FOR A SLAPSHOT 2 FOR A WRISTSHOT 3 FOR A BACKHANO 4 FOR A SNAP SHOT AREA TYPE IN THE NUMBER CORRESPONDING TO THE AREA YOU ARE AINTHG AT. ENTER: 1 FOR UPPER LEFT NAMO CORNER 2 FOR UPPER RIGHT NANO CORNER 3 FOR LOWER LEFT MAND CORNER 4 FOR LOWER RIGHT NAMO CORNER

AT THE START OF THE GAME, YOU WILL BE ASKED FOR THE NAMES OF YOUR PLAYERS. THEY ARE ENTERED IN THE ORDER: LEFT WING, CENTER, RIGHT WING, LEFT DEFEHSE, RIGHT DEFENSE, GOALKEEPER. ANY OTHER INPUT REDUTRED WILL HAVE EXPLAMATORY INSTRUCTIONS.

Horserace

This program simulates a one-mile horse race for three-year old thoroughbreds. Up to ten people may place bets on the race up to \$10,000 each. However, you may only bet to win. You place your bet by inputting the number of the horse, a comma, and the amount of your bet. The computer then shows the position of the horses at seven points around the track and at the finish. Payoffs and winnings are shown at the end.

The program was written by Laurie Chevalier while a student at South Portland High School.

Hurkle

Hurkle? A Hurkle is a happy beast and lives in another galaxy on a planet named Lirht that has three moons. Hurkle are favorite pets of the Gwik, the dominant race of Lirht and ... well, to find out more, read "The Hurkle is a Happy Beast," a story in the book A Way Home by Theodore Sturgeon.

In this program a shy hurkle is hiding on a 10 by 10 grid. Homebase is point 0,0 in the *Southwest* corner. Your guess as to the gridpoint where the hurkle is hiding should be a pair of whole numbers, separated by a comma. After each try, the computer will tell you the approximate direction to go look for the Hurkle. You get five guesses to find him; you may change this number in Line 110, although four guesses is actually enough.

This program was written by Bob Albrecht of People's Computer Company.

NURKLE CREATIVE COMPUTINO MORRISTOWN, NEW JERSEY

A NURKLE IS NIOINO ON A 10 BY 10 GRID. NOMEBASE ON THE GRID IS POINT 0,0 AND ANY ORIDPOINT IS A PAIR OF WHOLE NUMBERG SEPARATED BY A COMMA. TRY TO GUESS THE NURKLE'S GRIDPOINT. YOU GET 5 TRIES. AFTER EACH TRY, I WILL TELL YOU THE APPROXIMATE DIRECTION TO BO TO LOOK FOR THE NURKLE.

OUESS # 1 7 5,5 OO GOUTNEAST

OUESS # 2 7 6,4 00 SOUTH

OUESS N 3 ? 6,3 80 SOUTH

OUESS # 4 ? 6,2

YOU FOUND NIN IN 4 OUESSES!

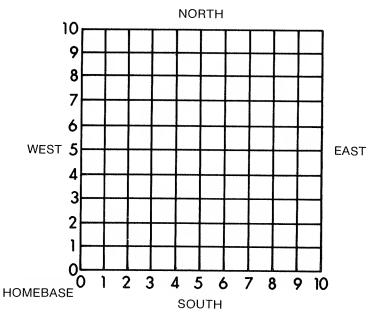

LET'S PLAY AGAIN. NURKLE IS NIOING.

GUEGS # 1 ? 5,5 OO NORTHWEST

OUES6 # 2 ? 3,6

OUE65 # 3 7 2,9

YOU FOUND NIM IN 3 BUESSES!

Kinema

This program tests your fundamental knowledge of kinematics. It presents a simple problem: a ball is thrown straight up in the air at some random velocity. You then must answer three questions about the flight of the ball:

- 1. How high will it go?
- 2. How long until it returns to earth?
- 3. What will be its velocity after a random number of seconds?

The computer evaluates your performance; within 15% of the correct answer is considered close enough. After each run, the computer gives you another problem until you interrupt it.

KINEMA was shortened from the original Huntington Computer Project Program, KINERV, by Richard Pav of Patchogue High School, Patchogue, New York.

KINENA CREATIVE CONPUTING MDRRISTDWN, NEW JERSEY

A BALL IS THROWN UPWARDS AT 35 HETERS PER SECOND.

NDW NIGN WILL IT GO (IN NETERS)? 10 NOT EVEN CLOSE.... CORRECT ANSWER IS 61.25

NOW LDMG UNTIL IT RETURNS (IN SECONDS)? 7 CLOSE ENOUGN. CORRECT ANSWER IS 7

WHAT WILL ITS VELDCITY BE AFTER 4.5 SECONOS? 20 NOT EVEN CLDSE....
CORRECT ANSWER IS -10

1 RIGHT OUT OF 3.

A BALL IS THROWN UPWARDS AT 25 METERS PER SECOND.

NOW NIGH WILL IT GD (IN NETERS)? 45 NOT EVEN CLOSE.... CDRRECT ANSWER IS 31.25

NOW LONG UNTIL IT RETURNS (IN SECONOS)? 4 NDT EVEN CLOSE.... CORRECT ANSWER IS 5

WHAT WILL ITS VELOCITY BE AFTER 3.2 SECDNDS? 12 NDT EVEN CLDSE.... CDRRECT ANSWER IS -7

This is one of the more comprehensive, difficult, and interesting land and resource management games. (If you've never played one of these games, start with HAMMURABI.)

In this game, you are Premier of Setats Detinu, a small communist island 30 by 70 miles long. Your job is to decide upon the budget of the country and distribute money to your countrymen from the communal treasury.

The money system is Rallods; each person needs 100 Rallods per year to survive. Your country's income comes from farm produce and tourists visiting your magnificent forests, hunting, fishing, etc. Part of your land is farm land but it also has an excellent mineral content and may be sold to foreign industry for strip mining. Industry import and support their own workers. Crops cost between 10 and 15 Rallods per square mile to plant, cultivate, and harvest. Your goal is to complete an eight-year term of office without major mishap. A word of warning: it isn't easy!

The author of this program is James A. Storer who wrote it while a student at Lexington High School.

KING CREATIVE COMPUTING MDRRISTOWN, HEW JERSEY

DD YDU WANT INSTRUCTIONS? YES

CONGRATULATIONS! YDU'VE JUST BEEN ELECTED PREMIER OF SETATS DETINU, A SMALL CDHMUHIST ISLAHD 30 BY 70 MILES LDHG. YDUR JOB IS TD DECIDE UPDH THE CDUHTRY'S BUDGET AHD DISTRIBUTE HOHEY TD YOUR COUHTRYHEH FRDH THE CDHHUNAL TREASURY. THE HONEY SYSTEH IS RALLDDS, AHD EACH PERSOH NEEDS 100 RALLDDS PER YEAR TO SURVIVE. YDUR CDUHTRY'S IHCDHE COHES FROM FARH PRODUCE AND TOURISTS VISITIHG YDUR HAGHIFICEHT FDRESTS, HUHTING, FISHING, ETC. HALF YOUR LAHD IS FARH LAHD WHICH ALSD HAS AN EXCELLEHT HIHERAL CONTENT AHD MAY BE SOLO TO FOREIGH IHDUSTRY (STRIP HINNIHG) WHD IMPORT AHD SUPPORT THEIR DWN WORKERS. CROPS CDST BETWEEH 10 AHD 15 RALLDDS PER SO. HILE TO PLAHT. YOUR GDAL IS TD CDHPLETE YDUR 8 YEAR TERH DF DFFICE.

YOU HOW HAVE 59907 RALLDDS IN THE TREASURY.
502 CDUHTRYMEN, AHD 2000 SD. HILES OF LAND.
THIS YEAR IHDUSTRY WILL BUY LAHD FDR 103 RALLDDS PER SD. MILE.
LAHD CURRENTLY COSTS 10 RALLDDS PER SD. HILE TO PLAHT.

HOW HAHY SD. HILES DO YDU WISH TO SELL TO IHOUSTRY? 200 HOW HAHY RALLODS WILL YDU DISTRIBUTE TO YOUR COUNTRYHEN? 50200 HOW MAHY SD. HILES DO YOU WISH TO PLANT? 500 HOW MAHY RALLODS DO YDU WISH TO SPEND DN POLLUTION CONTROL? 10000

212 WDRKERS CAME TO THE CDUHTRY AND 396 CDUNTRYHEH CAHE TO THE ISLAND. OF 500 SO. HILES PLAHTED, YDU NARVESTED 340 SO. HILES OF CRDPS. (DUE TD AIR AHD WATER POLLUTIDH FROM FOREIGH INOUSTRY.) HAKIHG 17510 RALLDDS. YDU HADE 8179 RALLDDS FROM TDURIST TRADE.

YDU HOW HAVE 65634 RALLDDS IH THE TREASURY.

B9B COUNTRYMEN, 212 FDREIGH WDRKERS, AHD 1800 SO. MILES DF LAND.
TNIS YEAR IHDUSTRY WILL 8UY LAHD FDR 98 RALLDDS PER SD. HILE.
LAND CURREHTLY COSTS 13 RALLDDS PER SD. HILE TO PLAHT.

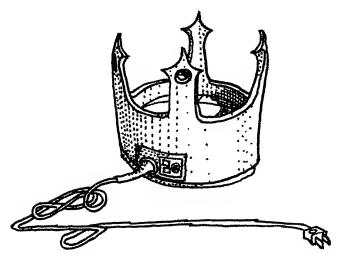

HDW HAHY SO. HILES DD YDU WISH TD SELL TD INDUSTRY? O
HDW HAHY RALLODS WILL YDU DISTRIBUTE TD YOUR CDUNTRYHEN? 89BOO
TNINK AGAIH, YDU'VE DNLY 65634 RALLODS IH THE TREASURY
NOW HAHY RALLDDS WILL YOU DISTRIBUTE TO YDUR COUHTRYHEN? 40000
HDW HAHY SO. MILES DD YDU WISH TO SPEND DH POLLUTIDH CDHTRDL? 6000

498 CDUHTRYMEH DIED OF STARVATION

Letter

LETTER is similar to the game GUESS in which you guess a number chosen by the computer; in this program, the computer picks a random letter of the alphabet and you must guess which one it is using the clues provided as you go along. It should not take you more than five guesses to get the mystery letter.

The program which appears here is loosely based on the original written by Bob Albrecht of People's Computer Company.

The Game of Life was originally described-in, Scientific American, October 1970, in an article by Martin Gardner. The game itself was originated by John Conway of Gonville and Caius College, University of Cambridge, England.

In the "manual" game, organisms exist in the form of counters (chips or checkers) on a large checkerboard and die or reproduce according to some simple genetic rules. Conway's criteria for choosing his genetic laws were carefully delineated as follows:

- 1. There should be no initial pattern for which there is a simple proof that the population can grow without limit.
- 2. There should be initial patterns that apparently do grow without limit.
- 3. There should be simple initial patterns that grow and change for a considerable period of time before coming to an end in three possible ways: fading away completely (from overcrowding or from becoming too sparse), settling into a stable configuration that remains unchanged thereafter, or entering an oscillating phase in which they repeat an endless cycle of two or more periods.

In brief, the rules should be such as to make the behavior of the population relatively unpredictable. Conway's genetic laws are delightfully simple. First note that each cell of the checkerboard (assumed to be an infinite plane) has eight neighboring cells, four adjacent orthogonally, four adjacent diagonally. The rules are:

- 1. Survivals. Every counter with two or three neighboring counters survives for the next generation.
- 2. Deaths. Each counter with four or more neighbors dies (is removed) from overpopulation. Every counter with one neighbor or none dies from isolation.
- 3. Births. Each empty cell adjacent to exactly three neighbors — no more. no fewer — is a birth cell. A counter is placed on it at the next move.

It is important to understand that all births and deaths occur simultaneously. Together they constitute a single generation or, as we shall call it, a 'move" in the complete "life history" of the initial configuration.

You will find the population constantly undergoing unusual, sometimes beautiful and always unexpected change. In a few cases the society eventually dies out (all counters vanishing), although this may not happen until after a great many generations. Most starting patterns either reach stable figures — Conway calls them "still lifes" - that cannot change or patterns that oscillate forever. Patterns with no initial symmetry tend to become symmetrical. Once this happens the symmetry cannot be lost, although it may increase in richness.

Conway used a DEC PDP-7 with a graphic display to observe long-lived populations. You'll probably find this more enjoyable to watch on a CRT than a hard-copy terminal.

Since MITS 8K BASIC does not have LINE INPUT, to enter leading blanks in the pattern, type a "." at the start of the line. This will be converted to a space by BASIC, but it permits you to type leading spaces. Typing DONE indicates that you are finished entering the pattern. See sample run.

Clark Baker of Project DELTA originally wrote this version of LIFE which was further modified by Steve North of Creative Computing.

Life for Two

LIFE-2 is based on Conway's game of Life. You must be familiar with the rules of LIFE before attempting to play LIFE-2.

There are two players; the game is played on a 5x5 board and each player has a symbol to represent his own pieces of 'life.' Live cells belonging to player 1 are represented by '*' and live cells belonging to player 2 are represented by the symbol '#'.

The # and * are regarded as the same except when deciding whether to generate a live cell. An empty cell having two '#' and one '*' for neighbors will generate a '#', i.e. the live cell generated belongs to the player who has the majority of the 3 live cells surrounding the empty cell where life is to be generated, for example:

	1	2	3	4	5
1					
2			*		
3				#	
4			#		
5					

A new cell will be generated at (3,3) which will be a '#' since there are two '#' and one '*' surrounding. The board will then become:

	1	2	3	4	5
1					
2					
3			#	#	
4					
5					

On the first move each player positions 3 pieces of life on the board by typing in the co-ordinates of the pieces. (In the event of the same cell being chosen by both players that cell is left empty.)

The board is then adjusted to the next generation and printed out.

On each subsequent turn each player places one piece on the board, the object being to annihilate his opponent's pieces. The board is adjusted for the next generation and printed out after both players have entered their new piece.

The game continues until one player has no more live pieces. The computer will then print out the board and declare the winner.

The idea for this game, the game itself, and the above write-up were written by Brian Wyvill of Bradford University in Yorkshire, England.

Literature Quiz

This is a simple CAI-type program which presents four multiple-choice questions from children's literature. Running the program is self-explanatory.

The program was written by Pamela McGinley while at DEC.

LITERATURE OUIZ CREATIVE CONPUTINO NORRISTOWN, NEW JERSEY

TEST YOUR KNOWLEDGE OF CHILDREN'S LITERATURE.

THIS IS A NULTIPLE-CNOICE OUIZ.

TYPE A 1, 2, 3, OR 4 AFTER THE DUESTION NARK.

DDDD LUCKI

IN PINOCCHID, WHAT WAS THE NAME OF THE CAT 1)TIOOER, 2)CICERO, 3)FIOARD, 4)OUIPETTD? 2 SORRY...FIDARD WAS HIS NAME.

FRON WHOSE DARDEN OID BUOS BUNNY STEAL THE CARROTS?

1)MR. NIXON'S, 2)ELNER FUDD'S, 3)CLEN JUOD'S, 4)STRONBOLI'S? 2
PRETTY GODD:

IN THE WIZARO OF OZ, DOROTHY'S DOG WAS NAMED 1) CICERO, 2) TRIXIE, 3) KING, 4) TOTO ?4
YEAL YDU'RE A REAL LITERATURE SIANT.

WHO WAS THE FAIR NAIDEN WNO ATE THE PDISON APPLE
1)SLEEPING BEAUTY, 2)CINDERELLA, 3)SNOW WHITE, 4)WENDY? 1
DH, COME DN NOW...IT WAS SNOW WHITE.

NOT BAD, BUT YOU NIBHT SPEND A LITTLE NORE TIME READIND THE NURSERY OREATS.

BREAK IN 96

Love

This program is designed to reproduce Robert Indiana's great art work "Love" with a message of your choice up to 60 characters long.

Your message is input as A\$ in Statement 60. Statements 100-130 repeat the message A\$ if it is less than 60 characters long and insert it into T\$. Statements 210-400 actually print the design. The data statements are an alternating count of the number of characters and blanks which form the design. These data give the correct proportions for a standard 10 character per inch Teletype or line printer. The 13.2 characters per inch of the Teletype Model 43 on which this was printed cause some distortion.

The love program was created by David Ahl.

LOVE CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

A TRIBUTE TO THE GREAT ANERICAN ARTIST, ROBERT INDIANA. HIS GREAT WORK WILL BE REPRODUCED WITH A MESSAGE OF YOUR CHOICE UP TO 60 CHARACTERS. IF YOU CAN'T THINK OF A NESSAGE, SINPLE TYPE THE WORD 'LOVE'

Roc

This game in its many different versions and names (ROCKET, LUNAR, LEM, and APOLLO) is by far and away the single most popular computer game. It exists in versions that start you anywhere from 500 feet to 200 miles above the moon, or other planets, too. Some allow the control of directional stabilization rockets and/or the retro rocket. The three versions presented here represent the most popular of the many variations.

In most versions of this game, the temptation is to slow up too soon and then have no fuel left for the lower part of the journey. This, of course, is disasterous (as you will find out when you land your own capsule)!

LUNAR was originally in FOCAL by Jim Storer while a student at Lexington High School and subsequently converted to BASIC by David Ahl. ROCKET was written by Eric Peters at DEC and LEM by William Labaree II of Alexandria, Virginia.

In this program, you set the burn rate of the retro rockets (pounds of fuel per second) every 10 seconds and attempt to achieve a soft landing on the moon. 200 lbs/sec really puts the brakes on, and 0 lbs/sec is free fall. Ignition occurs at 8 lbs/sec, so do not use burn rates between 1 and 7 lbs/sec. To make the landing more of a challenge, but more closely approximate the real Apollo LEM capsule, you should make the available fuel at the start (N) equal to 16,000 lbs, and the weight of the capsule (M) equal to 32,500 lbs in Statement 15.

Some versions of BASIC object to the series expansion calculations in Statements 420 and 430 (as you near the lunar surface, these numbers get very small). If your does, substitute the following expanded form for the expansion in Statement 420:

-Q*(1+Q*(1/2+Q*(1/3+Q*(1/4+Q/5))))

You should be able to figure the other one out yourself.

LUMAR CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

THIS IS A COMPUTER SIMULATION OF AN APOLLO LUNAR

LANOINO CAPSULE.

THE OM-BOARO COMPUTER HAS FAILED SO YOU MAVE TO LAND THE CAPSULE MAMUALLY.

SET BURN RATE OF RETRO ROCKETS TO ANY VALUE BETWEEN O (FREE FALL) AND 200 (HAXINUM BURM) POUMOS PER SECONO. SET NEW BURN RATE EVERY 10 SECONOS.

CAPSULE WEISHT 32,500 LBS; FUEL WEIGHT 16,500 LBS.

0000 LUCK

```

In this version, you start 500 feet above the lunar surface and control the burn rate in 1-second bursts. Each unit of fuel slows your descent by 1 ft/sec. The maximum thrust of your engine is 30 ft/sec/sec.

ROCKET CREATIVE COMPUTINO MORRISTOWN, NEW JERSEY

LUMAR LANGING SIMULATION

DO YOU WANT INSTRUCTIONS (YES OR HO)? YES

YOU ARE LANGING ON THE HOON AND NAVE TAKEN OVER NAMUAL CONTROL 500 FEET ABOVE A 0000 LANDING SPOT. YOU NAVE A DOWNWARD VELOCITY OF 50 FT/SEC. 120 UNITS OF FUEL REMAIN.

NERE ARE THE RULES THAT OOVERN YOUR SPACE VEHICLE:

- (1) AFTER EACH SECOND, THE NEIGHT, VELOCITY, AND RENAINING FUEL WILL BE REPORTED.
- (2) AFTER THE REPORT, A '7' WILL BE TYPED. ENTER THE NUMBER OF UNITB OF FUEL YOU WISN TO BURN OURIND THE NEXT SECONO. EACH UNIT OF FUEL WILL SLOW YOUR DESCENT BY 1 FT/SEC.
- (3) THE HAXIMUM THRUST OF YOUR ENGINE IS 30 FT/SEC/SEC OR
- 30 UNITS OF FUEL PER SECONO.

 (4) WHEN YOU CONTACT THE LUNAR SURFACE, YOUR DESCENT ENDINE
 WILL AUTOMATICALLY CUT OFF AND YOU WILL BE DIVEN A REPORT OF YOUR LANGING SPEED AND REMAINING FUEL.
 (5) IF YOU RUN OUT OF FUEL, THE '?' WILL NO LONGER APPEAR,
- BUT YOUR SECONO-BY-SECOND REPORT WILL CONTINUE UNTIL YOU CONTACT THE LUNAR SURFACE.

Master Mind®

In the March-April 1976 issue of Creative we published a computerized version of Master Mind, a logic game. Master Mind is played by two people—one is called the code-maker; the other, the code-breaker. At the beginning of the game the codemaker forms a code, or combination of colored pegs. He hides these from the code-breaker. The code-breaker then attempts to deduce the code, by placing his own guesses, one at a time, on the board. After he makes a guess (by placing a combination of colored pegs on the board) the code-maker then gives the code-breaker clues to indicate how close the guess was to the code. For every peg in the guess that's the right color and in the right position, the code-breaker gets a black peg. For every peg in the guess that's the right color but not in the right position, the code-breaker gets a white peg. Note that these black and white pegs do not indicate which pegs in the guess are correct, but merely that they exist. For example, if the code was:

Yellow Red Red Green and my guess was Red Red Yellow Black

I would receive two white pegs and one black peg for the guess. I wouldn't know (except by comparing previous guesses) which one of the pegs in my guess was the right color in the right position.

Many people have written computer programs to play Master Mind in the passive role, i.e., the computer is the codemaker and the human is the code-breaker. This is relatively trivial; the challenge is writing a program that can also play actively as a code-breaker.

Actually, the task of getting the computer to deduce the correct combination is not at all difficult. Imagine, for instance, that you made a list of all the possible codes. To begin, you select a guess from your list at random. Then, as you receive clues, you cross off from the list those combinations which you know are impossible. For example if your guess is Red Red Green Green and you receive no pegs, then you know that any combination containing either a red or a green peg is impossible and may be crossed off the list.

The process is continued until the correct solution is reached or there are no more combinations left on the list (in which case you know that the code-maker made a mistake in giving you the clues somewhere).

Note that in this particular implementation, we never actually create a list of the combinations, but merely keep track of which ones (in sequential order) may be correct. Using this system, we can easily say that the 523rd combination may be correct, but to actually produce the 523rd combination we have to count all the way from the first combination (or the previous one, if it was lower than 523). Actually, this problem could be simplified to a conversion from base 10 to base (number-ofcolors) and then adjusting the values used in the MID\$ function so as not to take a zeroth character from a string if you want to experiment. We did try a version that kept an actual list of all possible combinations (as a string array), which was significantly faster than this version, but which ate tremendous amounts of memory.

At the beginning of this game, you input the number of colors and number of positions you wish to use (which will directly affect the number of combinations) and the number of rounds you wish to play. While you are playing as the code-breaker, you may type in BOARD at any time to get a list of your previous guesses and clues, and QUIT to end the game. Note that this version uses string arrays, but this is merely for convenience and can easily be converted for a BASIC that has no string arrays as long as it has a MID\$ function. This is because the string arrays are one-dimensional, never exceed a length greater than the number of positions and the elements never contain more than one character

Math Dice

The program presents pictorial drill on addition facts using printed dice with no reading involved. It is good for beginning addition, since the answer can be derived from counting spots on the dice as well as by memorizing math facts or awareness of number concepts. It is especially effective run on a CRT terminal.

It was originally written by Jim Gerrish, a teacher at the Bernice A. Ray School in Hanover, New Hampshire.

HATH DICE CREATIVE COMPUTING HORRISTOWN, NEW JERSEY

THIS PROGRAM GENERATES SUCCESSIVE PICTURES OF TWO OICE. WHEN TWO DICE AND AN EOUAL SIGN FOLLOWED BY A QUESTION NARK HAVE BEEN PRINTED, TYPE YOUR ANSWER AHO THE RETURN KEY. TO COHCLUDE THE LESSON, TYPE CONTROL-C AS YOUR ANSWER.

Mugwump

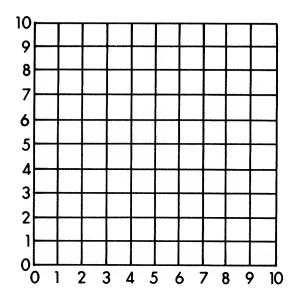

Your objective in this game is to find the four Mugwumps hiding on various squares of a 10 by 10 grid. Homebase (lower left) is position (0,0) and a guess is a pair of whole numbers (0 to 9), separated by commas. The first number is the number of units to the right of homebase and the second number is the distance above homebase.

You get ten guesses to locate the four Mugwumps; after each guess, the computer tells you how close you are to each Mugwump. Playing the game with the aid of graph paper and a compass should allow you to find all the Mugwumps in six or seven moves using triangulation similar to Loran radio navigation.

If you want to make the game somewhat more difficult, you can print the distance to each Mugwump either rounded or truneated to the nearest integer. Statement 390 would print either INT (D+.5) or INT (D).

This program was modified slightly by Bob Albrecht of People's Computer Company. It was originally written by students of Bud Valenti of Project SOLO in Pittsburgh, Pennsylvania.

Use this scale with a compass to help find the Mugwumps.

NUGWUNP CREATIVE COMPUTING MORRISTOWN. NEW JERSEY

THE OBJECT OF THIS GANE IS TO FIND FOUR NUGWUMPS NIDDEN ON A 10 BY 10 GRID. NOMEBASE IS POSITION 0,0 ANY GUESS YOU MAKE MUST BE TWO NUMBERS WITN EACH NUMBER BETWEEN 0 AND 9, INCLUSIVE. FIRST NUMBER IS DISTANCE TO RIGHT OF HOMEBASE AND SECOND NUMBER IS DISTANCE ABOVE MOMEBASE.

YOU GET 10 TRIES. AFTER EACH TRY, I WILL TELL YOU NOW FAR YOU ARE FROM EACH HUGWUMP.

TURN NO. 1 WHAT IS YOUR GUESS? 5,5

Name

NAME is a silly little ice-breaker to get a relationship going between a computer and a shy human. The sorting algorithm used is highly inefficient — as any reader of *Creative Computing* will recognize, this is the worst possible sort for speed. But the program is good fun and that's what counts here.

NAME was originally written by Geoffrey Chase of the Abbey, Portsmouth, Rhode Island.

THANK YOU, SENDJ NASUS. OOPS! I GUESS I GOT IT BACKVAROS. A SMART COMPUTER LIKE NE SHOULON'T NAME A MISTAKE LIKE THAT!

BUT I JUST NOTICEO YOUR LETTERS ARE OUT OF ORDER. LET'S PUT THEM IN ORDER LIKE THIS: AEJNNOSSSU

OON'T YOU LIKE THAT BETTER? YES

I KNEW YOU'D AGREE!!

I REALLY ENJOYED NEETING YOU SUSAN JONES. NAVE A NICE DAY!

Nicomachus

One of the most ancient forms of arithmetical puzzle is sometimes referred to as a "boomerang." At some time, everyone has been asked to "think of a number," and, after going through some process of private calculation, to state the result, after which the questioner promptly tells you the number you originally thought of. There are hundreds of varieties of the puzzle.

The oldest recorded example appears to be that given in *Arithmetica* of Nicomachus, who died about the year 120. He tells you to think of any whole number between 1 and 100 and divide it successively by 3, 5, and 7, telling him the remainder in each case. On receiving this information, he promptly discloses the number you thought of.

Can you discover a simple method of mentally performing this feat? If not, you can see how the ancient mathematician did it by looking at Lines 80-100 of the program.

Nicomachus was written by David Ahl.

NICOMA CREATIVE COMPUTINB MORRISTOWN, NEW JERSEY

NIM is one of the oldest two-person games known to man; it is believed to have originated in ancient China. The name, which was coined by the first mathematician to analyze it, comes from an archaic English verb which means to steal or to take away. Objects are arranged in rows between the two opponents as in the following example:

Opponents take turns removing objects until there are none left. The one who picks up the last object wins. The moves are made according to the following two rules:

- On any given turn only objects from one row may be removed. There is no restriction on which row or on how many objects you remove. Of course, you cannot remove more than are in the row.
- 2. You cannot skip a move or remove zero objects.

The winning strategy can be mathematically defined, however, rather than presenting it here, we'd rather let you find it on your own. HINT: Play a few games with the computer and mark down on a piece of paper the number of objects in each stack (in binary!) after each move. Do you see a pattern emerging?

This game of NIM is from Dartmouth College and is a generalized game which allows you to specify any starting size for the four piles and also a win option. To play traditional NIM, you would simply specify 7,5,3, and 1, and win option 1.

NIN CREATIVE CONPUTINO MORRISTOWN, NEW JERSEY

THIS IS THE GAME OF NIM.

DO YOU WANT INSTRUCTIONS? YES

THE GAME IS PLAYED WITH A NUMBER OF PILES OF OBJECTS.

AHY NUMBER OF OBJECTS ARE REHOVED FROM ONE PILE BY YOU AND

THE NACHINE ALTERNATELY. ON YOUR TURH, YOU NAY TAKE

ALL THE OBJECTS THAT REMAIN IH AMY PILE BUT YOU NUST

TAKE AT LEAST ONE OBJECT, AND YOU NAY TAKE OBJECTS FROM
OHLY OHE PILE OH A SINGLE TURN. YOU NUST SPECIFY WHETHER
WINNING IS OFFINED AS TAKINO OR NOT TAKING THE LAST OBJECT,

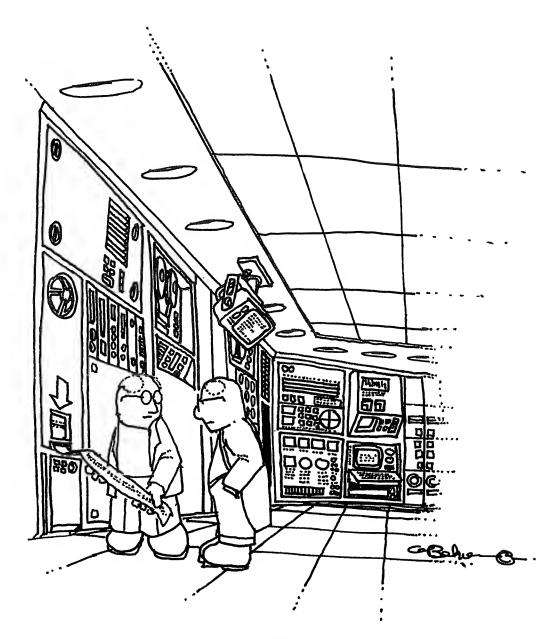

THE NUMBER OF PILES IN THE GAME, AND HOW MANY OBJECTS ARE
ORIGIHALLY IN EACH PILE. EACH PILE NAY COHTAIN A

DIFFERENT HUMBER OF OBJECTS.

THE HACHINE WILL SHOW ITS NOVE BY LISTING EACH PILE AND THE
MUMBER OF OBJECTS REHAINIHG IN THE PILES AFTER EACH OF ITS

```

Number

In contrast to other number guessing games where you keep guessing until you get the random number selected by the computer (GUESS, TRAP, STARS, etc.), in this game you get only one guess per play and you gain or lose points depending upon how close your guess is to the random number selected by the computer. You occasionally get a jackpot which will double your point count. You win when you get 500 points.

Tom Adametx wrote this program while a student at Curtis Junior High School in Sudbury, Massachusetts.

YOU HAVE 100 POINTS. BY GUESSING NUMBERS FROM 1 TO 5, YOU CAN DAIN OR LOSE POINTS DEPENDING UPON HOW CLOSE YOU GET TO A RANGOM NUMBER SELECTED BY THE COMPUTER.

YOU OCCASIONALLY WILL GET A JACKPOT WHICH WILL DOUBLE(I)
YOUR POINT COUNT. YOU WIN WHEN YOU BET 500 POINTS.

```
GUESS A NUMBER FROM 1 TO 57 2
YOU NAVE 95 POINTS.
QUESS A NUMBER FROM 1 TO 57 2
YOU NAVE 90 POINTS.
QUESS A NUMBER FROM 1 TO 57 2
YOU HAVE 95 POINTS.
OUESS A NUMBER FROM 1 TO 57 2
YOU NAVE 96 POINTS.
QUESS A NUMBER FROM 1 TO 57 2
YOU NIT THE JACKPOT!!! YOU HAVE 192 POINTS.
OUESS A NUMBER FROM 1 TO 57 3
YOU HIT THE JACKPOTIII
YOU HAVE 384 POINTS.
QUESS A NUMBER FROM 1 TO 57 1
YOU HAVE 389 POINTS.
GUESS A NUMBER FROM 1 TO 57 2
YOU HAVE 394 POINTS.
GUESS A NUMBER FROM 1 TO 57 5
YOU HIT THE JACKPOTI!!
IIIIYOU WINIIII WITH 788 POINTS.

One Check

In this game or puzzle, 48 checkers are placed on the two outside spaces of a standard 64-square checkerboard as shown:

•	•	•	•	•	•	•	•
•	•	•	•	•	•	•	•
•	•					•	•
•	•					•	•
•	•					•	•
•	•					•	•
•	•	•	•	•	•	•	•
•	•	•	•	•	•	•	•

The object is to remove as many checkers as possible by diagonal jumps (as in standard checkers).

It is easy to remove 30 to 39 checkers, a challenge to remove 40 to 44, and a substantial feat to remove 45 to 47.

The program was created and written by David Ahl.

OHE CHECK
CREATIVE COMPUTING MORRISTOWN, HEW JERSEY

SOLITAIRE CHECKER PUZZLE BY DAVID AML

4B CHECKERS ARE PLACED ON THE 2 DUTSIDE SPACES OF A STANDARD 64-SOUARE CHECKERBOARD. THE OBJECT IS TO REHOVE AS HAMY CHECKERS AS POSSIBLE BY DIAGONAL JUMPS (AS IN STANDARD CHECKERS). USE THE HUMBERED BOARD TO IMDICATE THE SOUARE YOU WISH TO JUMP FROM AND TO. ON THE BOARD PRINTED OUT OM EACH TURN '1' INDICATES A CHECKER AND '0' AN EMPTY SOUARE. WHEN YOU HAVE MO POSSIBLE JUMPS REMAINING, IMPUT A '0' IM RESPONSE TO DUESTIOM 'JUMP FROM ?'

HERE IS THE NUMERICAL BOARD:

1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16
17	1 B	19	20	21	22	23	24
25	26	27	28	29	30	31	32
33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	4 B
49	50	51	52	53	54	55	56
57	5B	59	60	61	62	63	64

AND HERE IS THE OPENING POSITION OF THE CHECKERS.

Orbit

ORBIT challenges you to visualize spatial positions in polar coordinates. The object is to detonate a Photon explosive within a certain distance of a germ laden Romulan spaceship. This ship is orbiting a planet at a constant altitude and orbital rate (degrees/hour). The location of the ship is hidden by a device that renders the ship invisible, but after each bomb you are told how close to the enemy ship your bomb exploded. The challenge is to hit an invisible moving target with a limited number of shots.

The planet can be replaced by a point at its center (called the origin); then the ship's position can be given as a distance from the origin and an angle between its position and the eastern edge of the planet.

The distance of the bomb from the ship is computed using the law of cosines (see line 430 of the program listing). The law of cosines states

$$D = \sqrt{R^{**}2 + D1^{**}2 + R^{*}D1^{*}COS(A-A1)}$$

where D is the distance between the ship and the bomb, R is the altitude of the ship, D1 is the altitude of the bomb, and A-A1 is the angle between the ship and the bomb.

Practice Off-Line Problem:

Aircraft appear on radar as blips of the form "=". What is the distance between the TWA and United aircraft shown on the radar screen on the right. ORBIT CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

SONEWHERE ABOVE YOUR PLANET IS A RONULAN SHIP.

THE SHIP IS IN A CONSTANT POLAR ORBIT. ITS DISTANCE FRON THE CENTER OF YOUR PLANET IS FRON 10,000 TO 30,000 HILES AND AT ITS PRESENT VELOCITY CAN CIRCLE YOUR PLANET ONCE EVERY 12 TO 36 NOURS.

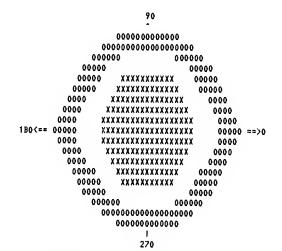

UNFORTUNATELY TNEY ARE USING A CLOAKING DEVICE SO YOU ARE UNABLE TO SEE TNEN, BUT WITH A SPECIAL INSTRUMENT YOU CAN TELL HOW MEAR THEIR SMIP YOUR PHOTON BONB EXPLODED. YOU MAVE SEVEN MOURS UNTIL TNEY MAVE BUILT UP SUFFICIENT POWER IN ORDER TO ESCAPE YOUR PLANET'S GRAVITY.

YOUR PLANET HAS ENOUGH POWER TO FIRE ONE BOMB AN NOUR.

AT THE BEGINNING OF EACH NOUR YOU WILL BE ASKED TO GIVE AN ANGLE (BETWEEN 0 AND 360) AND A DISTANCE IN UNITS OF 100 NILES (BETWEEN 100 AND 300), AFTER WNICH YOUR BONB'S DISTANCE FROM THE ENENY SNIP WILL BE DIVEN.

AN EXPLOSION WITHIN 5,000 NILES OF THE RONULAN SNIP

BELOW IS A DIAGRAM TO NELP YOU VISUALIZE YOUR PLIGHT.

X - YOUR PLANET O - THE ORBIT OF THE RONULAN SNIP

315 270 270 225 180

ORBIT was originally called SPACE WAR and was written by Jeff Lederer of Project SOLO Pittsburgh, Pennsylvania.

ON THE ABOVE DIAGRAN, THE RONULAN SHIP IS CIRCLING COUNTERCLOCKWISE AROUND YOUR PLANET. OON'T FORGET WITHOUT SUFFICIENT POWER THE RONULAN SNIP'S ALTITUDE AND ORBITAL RATE WILL REMAIN CONSTANT.

GOOD LUCK. THE FEDERATION IS COUNTING ON YOU.

HOUR 1 , AT WHAT ANGLE OO YOU WISH TO SEND YOUR PHOTON BOMB? 90 HOW FAR OUT OO YOU WISH TO DETONATE IT? 250

YOUR PHOTON BONB EXPLODED 270.671 *10^2 NILES FRON THE RONULAN SHIP.

NOUR 2 , AT WHAT ANGLE OO YOU WISN TO SENO YOUR PNOTON BONB? 260 NOW FAR OUT OO YOU WISN TO DETONATE IT? 200

YOUR PNOTON BOMB EXPLODED 3B2.522 *10^2 NILES FROM THE RONULAN SNIP.

NOUR 3 , AT WHAT ANGLE OO YOU WISN TO SENO YOUR PNOTON BONB? 35 NOW FAR OUT OO YOU WISH TO DETONATE IT? 200

YOUR PHOTON BOND EXPLODED 136.808 $\pm10^2$ NILES FRON THE ROMULAN SNIP.

NOUR 4 , AT WHAT ANOLE OO YOU WISH TO SENO YOUR PHOTON BONB? 20 NOW FAR OUT OO YOU WISH TO DETONATE IT? 300

YOUR PHOTON BONB EXPLODED 342.719 *10^2 NILES FROM THE RONULAN SHIP.

NOUR 5 , AT WHAT ANGLE OO YOU WISH TO SEND YOUR PHOTON BOMB? 40 NOW FAR OUT OO YOU WISH TO DETONATE IT? 100

YOUR PHOTON BOMB EXPLODED 22B.24 *10^2 NILES FROM THE RONULAN SNIP.

NOUR 6 , AT WHAT ANOLE OO YOU WISH TO SEND YOUR PHOTON BONB? 55 NOW FAR OUT OO YOU WISH TO DETONATE IT? 209

YOUR PHOTON BONB EXPLODED 328.821 *10^2 NILES FROM THE RONULAN SHIP.

NOUR 7 , AT WHAT ANGLE OO YOU WISN TO SEND YOUR PHOTON BONB? 20 NOW FAR OUT OO YOU WISH TO DETONATE IT? 100

YOUR PHOTON BONB EXPLODED 299.17B #10^2 NILES FROM THE RONULAN SHIP.
YOU HAVE ALLOWED THE RONULANS TO ESCAPE.
ANOTHER RONULAN SHIP HAS GOME INTO ORBIT.
OO YOU WISH TO TRY TO DESTROY IT? I NATE COMPUTERS THAT NEVER LOSE GOOD BYE

In this game, you take orders for pizzas from people living in Hyattsville. Armed with a map of the city, you must then tell your delivery boy the address where the pizza is to be delivered. If the pizza is delivered to the correct address, the customer phones you and thanks you; if not, you must give the driver the correct address until the pizza gets delivered.

Some interesting modifications suggest themselves for this program such as pizzas getting cold after two incorrect delivery attempts or taking three or more orders at a time and figuring the shortest delivery route. Send us your modifications!

This program seems to have surfaced originally at the University of Georgia in Athens, Georgia. The author is unknown.

PIZZA CREATIVE COMPUTING NORRISTOWN, NEW JERSEY

PIZZA DELIVERY GAME

WHAT IS YOUR FIRST NAME? DARTH

NI, DARIN. IN THIS GAME YOU ARE TO TAKE ORDERS FOR PIZZAS. THEH YOU ARE TO TELL A DELIVERY BOY WHERE TO DELIVER THE ORDERED PIZZAS.

MAP OF THE CITY OF HYATTSVILLE

THE ABOVE IS A NAP OF THE NONES WHERE YOU ARE TO SEHD PIZZAS.

YOUR JOB IS TO GIVE A TRUCK DRIVER THE LOCATION OR COORDINATES OF THE NONE ORDERING THE PIZZA.

DO YOU NEED HORE DIRECTIONS? YES

SONEBODY WILL ASK FOR A PIZZA TO BE OELIVERED. THEH A DELIVERY BOY WILL ASK YOU FOR THE LOCATIOH.

EXAMPLE:
THIS IS J. PLEASE SEHD A PIZZA.

THIS IS J. PLEASE SEHD A PIZZA.
DRIVER TO DARTN. WHERE DOES J LIVE?
YOUR ANSWER WOULD BE 2,3

UNDERSTAND? YES GOOD. YOU ARE NOW READY TO START TAKING ORDERS.

GOOD LUCK!!

NELLO DARTH'S PIZZA. THIS IS D. PLEASE SEND A PIZZA. DRIVER TO DARTN. WHERE DOES D LIVE? 4,1 HELLO DARTN. THIS IS D, THANKS FOR THE PIZZA.

NELLO DARTH'S PIZZA. THIS IS O. PLEASE SEHD A PIZZA.
DRIVER TO DARTH. WHERE DOES O LIVE? 3,4
HELLO DARTH. THIS IS O, THANKS FOR THE PIZZA.

HELLO DARTH'S PIZZA. THIS IS H. PLEASE SEND A PIZZA.
DRIVER TO DARTH. WHERE DOES H LIVE? 4,2
THIS IS N. I DID HOT ORDER A PIZZA.
I LIVE AT 4,2
DRIVER TO DARTH. WHERE DOES H LIVE? 2,4
NELLO DARTH. THIS IS H, THANKS FOR THE PIZZA.

HELLO OARTN'S PIZZA. THIS IS J. PLEASE SEND A PIZZA.
DRIVER TO DARTH. WHERE DOES J LIVE? 2,3
HELLO DARTH. THIS IS J, THANKS FOR THE PIZZA.

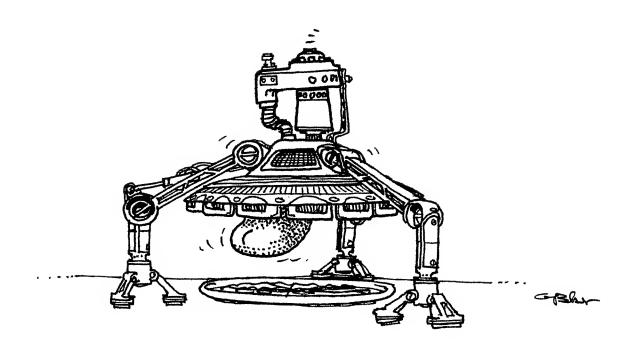

HELLO DARTH'S PIZZA. THIS IS F. PLEASE SEND A PIZZA.

DRIVER TO DARTH. WHERE DOES F LIVE? 2,2

HELLO DARTH. THIS IS F, THAHKS FOR THE PIZZA.

DO YOU WANT TO DELIVER MORE PIZZAS? HO

O.K. DARTH, SEE YOU LATER!

Poetry

This program produces random verse which might loosely be considered in the Japanese Haiku style. It uses 20 phrases in four groups of five phrases each and generally cycles through the groups in order. It inserts commas (random — 19% of the time), indentation (random — 22% of the time), and starts new paragraphs (18% probability, but at least once every 20 phrases).

The phrases in POETRY are somewhat suggestive of Edgar Allen Poe. Try it with phrases from computer technology, from love and romance, from four-year-old children, or from some other subject. Send us the output.

Here are some phrases from nature to try:

Carpet of ferns Morning dew Tang of dawn Swaying pines

Mighty Oaks
Grace and beauty
Silently singing
Nature speaking
Untouched, unspoiled

Entrances me Soothing me Rustling leaves Radiates calm

Shades of green Tranquility ...so peaceful

The original author of this program is unknown. It was modified and reworked by Jim Bailey, Peggy Ewing, and Dave Ahl at DEC.

You and the computer are opponents in this game of draw poker. At the start of the game, each player is given \$200. The game ends when either player runs out of money, although if you go broke the computer will offer to buy your wristwatch or diamond tie tack.

The computer opens the betting before the draw; you open the betting after the draw. If you don't have a hand that's worth anything and you want to fold, bet 0. Prior to the draw, to check the draw, you may bet .5. Of course, if the computer has made a bet, you must match it in order to draw or, if you have a good hand, you may raise the bet at any time.

The author is A. Christopher Hall of Trinity College, Hartford, Connecticut.

POKER CREATIVE CONPUTING NORRISTOWN, NEW JERSEY

WELCONE TO THE CASINO. WE EACH NAVE \$200 I WILL OPEN THE BETTING BEFDRE THE DRAW; YDU DPEN AFTER WNEN YOU FOLD, BET 0; TO CNECK, BET .5 ENDUGH TALK -- LET'S GET DOWN TO BUSINESS

THE ANTE IS \$5. I WILL DEAL

YOUR HAND:

1 -- JACK OF SPADES 3 -- 4 OF SPADES 2 -- QUEEN OF SPADES 4 OF SPADES 4 -- 3 OF SPADES 5 -- OUEEN OF DIANONDS

I CHECK WHAT IS YOUR BET? 5 I'LL SEE YOU

NOW WE DRAW -- NOW NAMY CAROS OO YOU WANT? 1 WHAT ARE THEIR NUMBERS

7.5 YOUR NEW HAND:

1 -- JACK OF SPADES
3 -- 4 OF SPADES
5 -- 3 OF HEARTS 2 -- QUEEN OF SPADES 4 -- 3 OF SPADES

I AM TAKING 3 CARDS

UNAT IS YOUR BET? 5 I'LL SEE YOU, AND RAISE YDU 8
WHAT IS YOUR BET? 8

NDW WE CONPARE HANOS NY HAND:

6 -- 3 OF CLUBS 7 -- 5 OF HEARTS

8 -- QUEEN DF CLUBS 10 -- ACE OF SPADES 9 -- QUEEN OF NEARTS

YOU HAVE A PAIR OF 3 S AND I NAVE A PAIR OF DUEENS THE HAND IS DRAWN ALL \$ 46 RENAINS IN THE POT

THE ANTE IS \$5. I WILL DEAL

YDUR NANO:

1 -- 8 OF CLUBS 3 -- 6 OF HEARTS 2 -- 7 DF SPADES 4 -- 2 OF CLUBS 5 -- 3 OF DIANONDS

I'LL OPEH WITH 28 **UNAT IS YOUR BET? 0**

HOW I HAVE \$ 228 AND YOU HAVE \$ 172 OO YOU WISH TO CONTINUE? YES

THE ANTE IS \$5. I WILL BEAL

YOUR HAND:

1 -- ACE OF CLUBS
3 -- KING OF CLUBS
5 -- 2 OF SPADES 2 -- QUEEN OF CLUBS 4 -- 7 DF CLUBS

I CHECK WNAT IS YDUR BET? 5 I'LL SEE YOU

NOW WE DRAW -- NOW MANY CARDS DO YOU WANT? 1 WHAT ARE THEIR NUMBERS 7 5

YOUR NEW HAND:

1 -- ACE OF CLUBS 3 -- KING OF CLUBS 2 -- OUEEN OF CLUBS 4 -- 7 OF CLUBS 5 -- 5 OF CLUBS

I AN TAKING 1 CARD WHAT IS YDUR BET? 100 I'LL SEE YOU, AND RAISE YOU 101 **UNAT IS YOUR BET? 101**

YOU CAN'T BET WITH WHAT YOU HAVEN'T GOT WOULD YOU LIKE TO SELL YOUR WATCH? YES I'LL GIVE YDU \$75 FDR IT WHAT IS YOUR BET? 101

NOW WE COMPARE HANDS NY HAND:

6 -- 6 OF CLUBS 7 -- 8 OF DIANONDS B -- 8 OF CLUBS 10 -- 9 OF CLUBS 9 -- 9 OF SPADES

YOU HAVE A FLUSH IN CLUBS AND I HAVE TWO PAIR, 9 S YDU WIN NDW I HAVE \$ 17 AND YOU HAVE \$ 458 DD YOU WISH TO CONTINUE? YES

THE ANTE IS \$5. I WILL BEAL

YOUR HAND:

1 -- JACK OF SPADES 3 -- ACE OF CLUBS 2 -- 4 OF CLUBS 4 -- OUEEN OF CLUBS 5 -- 5 OF HEARTS

I CHECK WHAT IS YOUR BET? 5 I'LL SEE YOU

NOW WE DRAW -- HOW MANY CARDS DO YOU WANT? 2 WHAT ARE THEIR NUMBERS

YOUR NEW HAND:

1 -- JACK OF SPADES 3 -- ACE OF CLUBS 2 -- 5 OF CLUBS 4 -- OUEEN OF CLUBS 9 OF DIANONDS

I AN TAKING 1 CARD WHAT IS YOUR BET? 5 I'LL SEE YOU

NOW WE COMPARE NAMES NY HAND:

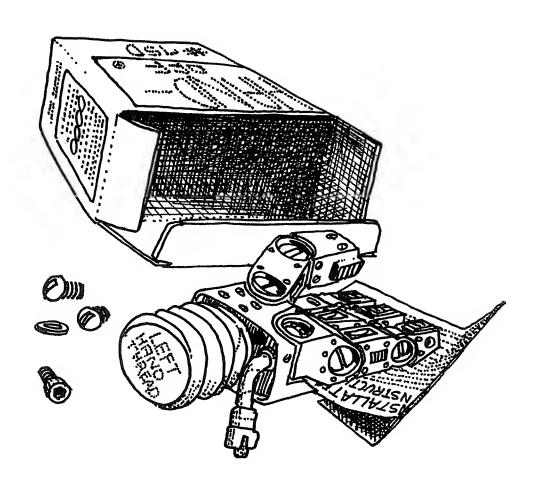

6 -- 3 OF HEARTS 7 -- 6 OF NEARTS 9 -- 9 OF CLUBS B -- 7 OF HEARTS 10 -- ACE OF HEARTS

YOU HAVE SCHNALTZ, ACE NIGH AND I HAVE SCHNALTZ, ACE NIGH THE NAND IS DRAWN ALL \$ 30 RENAINS IN THE POT

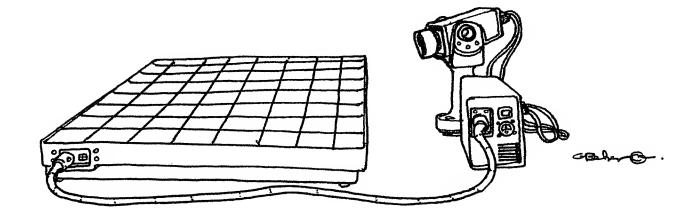

I'N BUSTED. CONGRATULATIONS!

Queen

This game is based on the permissible moves of the chess queen — i.e., along any vertical, horizontal, or diagonal. In this game, the queen can only move to the left, down, and diagonally down to the left.

The object of the game is to place the queen (one only) in the lower left-hand square (no. 158), by alternating moves between you and the computer. The one to place the queen there wins.

You go first and place the queen in any one of the squares on the top row or the right-hand column. That is your first move. The computer is beatable, but it takes some figuring. See if you can devise a winning strategy.

OUEEM
CREATIVE CONPUTING HORRISTOWN, HEW JERSEY

OO YOU WANT INSTRUCTIONS? YES WE ARE GOING TO PLAY A GAME BASED ON ONE OF THE CMESS MOVES. OUR OUEEN WILL BE ABLE TO NOVE ONLY TO THE LEFT, OOWN, OR OIAGONALLY DOWN AND TO THE LEFT.

THE OBJECT OF THE GAME IS TO PLACE THE OUEEN IN THE LOWER LEFT MAND SOURRE BY ALTERNATING MOVES BETWEEN YOU AND THE COMPUTER. THE FIRST ONE TO PLACE THE OUEEN THERE WINS.

YOU GO FIRST AND PLACE THE OUEEN IN ANY ONE OF THE SOUARES ON THE TOP ROW OR RIGHT HAND COLUMN.
THAT WILL BE YOUR FIRST HOVE.
WE ALTERMATE NOVES.
YOU NAY FORFEIT BY TYPINO 'O' AS YOUR NOVE.
BE SURE TO PRESS THE RETURN KEY AFTER EACH RESPONSE.

Reverse

The game of REVERSE requires you to arrange a list of numbers in numerical order from left to right. To move, you tell the computer how many numbers (counting from the left) to reverse. For example, if the current list is:

2 3 4 5 1 6 7 8 9 and you reverse 4, the result will be: 5 4 3 2 1 6 7 8 9

Now if you reverse 5, you wirl!

There are many ways to beat the game, but approaches tend to be either algorithmic or heuristic. The game thus offers the player a chance to play with these concepts in a practical (rather than theoretical) context.

An algorithmic approach guarantees a solution in a predictable number of moves, given the number of items in the list. For example, one method guarantees a solution in 2N - 3 moves when the list contains N numbers. The essence of an algorithmic approach is that you know in advance what your next move will be. One could easily program a computer to do this.

A heuristic approach takes advantage of "partial orderings" in the list at any moment. Using this type of approach, your next move is dependent on the way the list currently appears. This way of solving the problem does not guarantee a solution in a predictable number of moves, but if you are lucky and clever, you may come out ahead of the algorithmic solutions. One could not so easily program this method

In practice, many players adopt a "mixed" strategy, with both algorithmic and heuristic features. Is this better than either "pure" strategy?

The program was created by Peter Sessions of People's Computer Company and the notes above adapted from his original write-up.

REVERSE -- A GAME OF SKILL

00 YOU WANT THE RULES? YES

THIS IS THE GAME OF 'REVERSE'. TO WIN, ALL YOU MAVE TO OO IS ARRAHGE A LIST OF NUMBERS (1 TMROUGH 9) IH NUMERICAL ORDER FROM LEFT TO RIOHT. TO HOVE, YOU TELL HE HOW MANY NUMBERS (COUNTING FROM THE LEFT) TO REVERSE. FOR EXAMPLE, IF THE CURRENT LIST IS:

234516789

AHO YOU REVERSE 4, THE RESULT WILL BE:

5 4 3 2 1 6 7 8 9

NOW IF YOU REVERSE 5. YOU WIN!

1 2 3 4 5 6 7 8 9

NO COURT YOU WILL LIKE THIS CAME, BUT IF YOU WANT TO QUIT, REVERSE O (ZERO).

HERE WE OO ... THE LIST IS:

2 4 5 1 9 6 3 7 8

NOW HAHY SNALL I REVERSE? 9

8 7 3 6 9 1 5 4 2

HOW MANY SNALL I REVERSE? 4

6 3 7 8 9 1 5 4 2

HOW HANY SHALL I REVERSE? 5

7 8 7 3 6 1 5 4 2

HOW HANY SNALL I REVERSE? 9

2 4 5 1 6 3 7 8 9

NOW HAHY SHALL I REVERSE? 3

5 4 2 1 6 3 7 8 9

HOW HANY SHALL I REVERSE? 4

1 2 4 5 6 3 7 8 9

NOW HANY SHALL I REVERSE? 6

3 6 5 4 2 1 7 8 9

HOW HANY SHALL I REVERSE? 4

4 5 6 3 2 1 7 8 9 NOW HANY SNALL I REVERSE? 3

6 5 4 3 2 1 7 8 9

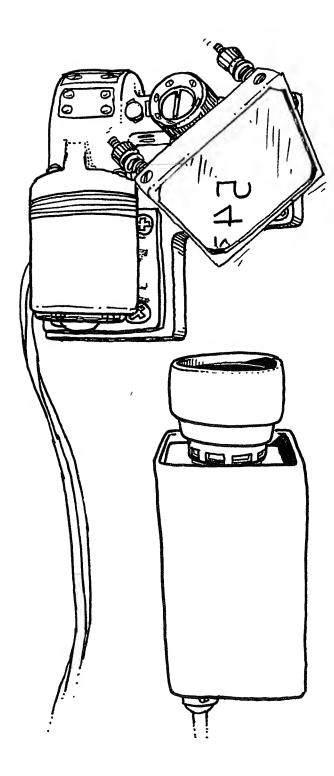

HOW HANY SHALL I REVERSE? 6

1 2 3 4 5 6 7 8 9

YOU WON IT IN 10 HOVES!!!

TRY AGAIN (YES OR NO)? NO

O.K. NOPE YOU HAD FUH!!

Rock, Scissors, Paper

Remember the game of rock-scissors-paper. You and your opponent make a motion three times with your fists and then either show a flat hand (paper), fist (rock), or two fingers (scissors). Depending upon what is shown, the game is a tie (both show the same) or one person wins. Paper wraps up rock, so it wins. Scissors cut paper, so they win. And rock breaks scissors, so it wins.

In this computerized version of rockscissors-paper, you can play up to ten games vs. the computer.

Charles Lund wrote this game while at the American School in The Hague, Netherlands.

HOW MAHY GAMES? 10

Roulette

This game simulates an American Roulette wheel; "American" because it has 38 number compartments (1 to 36, 0 and 00). The European wheel has 37 numbers (1 to 36 and 0). The Bahamas, Puerto Rico, and South American countries are slowly switching to the American wheel because it gives the house a bigger percentage. Odd and even numbers alternate around the wheel, as do red and black. The layout of the wheel insures a highly random number pattern. In fact, roulette wheels are sometimes used to generate tables of random numbers.

In this game, you may bet from \$5 to \$500 and you may bet on red or black, odd or even, first or second 18 numbers, a column, or single number. You may place any number of bets on each spin of the wheel.

There is no long-range winning strategy for playing roulette. However, a good strategy is that of "doubling." First spin, bet \$1 on an even/odds bet (odd, even, red, or black). If you lose, double your bet to \$2. If you lose again, double to \$4. Continue to double until you win (i.e., you break even on a losing sequence). As soon as you win, bet \$1 again, and after every win, bet \$1. Do not ever bet more than \$1 unless you are recuperating losses by doubling. Do not ever bet anything but the even odds bets. Good luck!

Russian Roulette

In this game, you are given by the computer a revolver loaded with one bullet and five empty chambers. You spin the chamber and pull the trigger by inputting a "1," or, if you want to quit, input a "2." You win if you play ten times and are still alive.

Tom Adametx wrote this program while a student at Curtis Jr. High School in Sudbury, Massachusetts.

Salvo

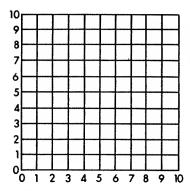

The rules are *not* explained by the program, so read carefully this description by Larry Siegel, the program author.

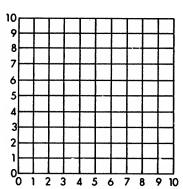

SALVO is played on a 10x10 grid or board using an x,y coordinate system. The player has 4 ships: battleship (5 squares), cruiser (3 squares), and two destroyers (2 squares each). The ships may be placed horizontally, vertically, or diagonally and must not overlap. The ships do not move during the game.

As long as any square of a battleship still survives, the player is allowed three shots, for a cruiser 2 shots, and for each destroyer 1 shot. Thus, at the beginning of the game the player has 3+2+1+1=7 shots. The player enters all of his shots and the computer tells what was hit. A shot is entered by its grid coordinates, x,y. The winner is the one who sinks all of the opponent's ships.

Important note: Your ships and the computer's ships are located on 2 separate 10x10 boards.

Author of the program is Lawrence Siegel of Shaker Heights, Ohio.

Sine Wave

Did you ever go to a computer show and see a bunch of CRT terminals just sitting there waiting forlornly for someone to give a demo on them. It was one of those moments when I was at DEC that I decided there should be a little bit of background activity. And why not plot with words instead of the usual X's? Thus SINE WAVE was born and lives on in dozens of different versions. At least those CRTs don't look so lifeless anymore.

CREATIVE

Slalom

This game simulates a slalom run down a course with from one to 25 gates. The user picks the number of gates and has some control over his speed down the course.

If you're not a skier, here's your golden opportunity to try it with minimal risk. If you are a skier, here's something to do while your leg is in a cast.

SLALOM was written by J. Panek while a student at Dartmouth College.

SLALOH CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

HOW MANY GATES DOES THIS COURSE HAVE (1 TO 25)? 12

TYPE "INS" FOR INSTRUCTIONS
TYPE "MAX" FOR APPROXIMATE HAXIHUM SPEEDS
TYPE "RUN" FOR THE BEGINNING OF THE RACE
COMMAND--? INS

****SLALOM: THIS IS THE 1976 WINTER OLYMPIC GIANT SLALOH. YOU ARE THE AMERICAN TEAM'S ONLY HOPE OF A GOLD MEDAL.

O--TYPE THIS IF YOU WANT TO SEE HOW LONG YOU'VE TAKEN
1--TYPE THIS IF YOU WANT TO SPEED UP A LOT
2--TYPE THIS IF YOU WANT TO SPEED UP A LITTLE
3--TYPE THIS IF YOU WANT TO SPEED UP A TEERSY
4--TYPE THIS IF YOU WANT TO CHECK A TEENSY
6--TYPE THIS IF YOU WANT TO CHECK A LITTLE
7--TYPE THIS IF YOU WANT TO CHECK A LOT
8--TYPE THIS IF YOU WANT TO CHECK A LOT

THE PLACE TO USE THESE OPTIONS IS WHEN THE COMPUTER ASKS:

OPTION?

lots

The slot machine or one-arm bandit is a mechanical device that will absorb coins just about as fast as you can feed it. After inserting a coin, you pull a handle that sets three independent reels spinning. If the reels stop with certain symbols appearing in the pay line, you get a certain payoff. The original slot machine, called the Liberty Bell, was invented in 1895 by Charles Fey in San Francisco. Fey refused to sell or lease the manufacturing rights. so H.S. Mills in Chicago built a similar, but much improved, machine called the Operators Bell. This has survived nearly unchanged to-today.

On the Operators Bell and other standard slot machines, there are 20 symbols on each wheel but they are not distributed evenly among the objects (cherries, bar, apples, etc.). Of the 8,000 possible combinations, the expected payoff (to the player) is 7,049 or \$89.11 for every \$100.00 put in, one of the lowest expected payoffs of all casino games.

In the program here, the payoff is considerably more liberal; indeed it appears to favor the player by 11% i.e., an expected payoff of \$111 for each \$100 bet

The program was originally written by Fred Mirabelle and Bob Harper.

Splat

SPLAT simulates a parachute jump in which you try to open your parachute at the last possible moment without going splat! You may select your own terminal velocity or let the computer do it for you. You may also select the acceleration due to gravity or, again, let the computer do it in which case you might wind up on any one of eight planets (out to Neptune), the moon, or the sun.

The computer then tells you the height you're jumping from and asks for the seconds of free fall. It then divides your free fall time into eight intervals and gives you progress reports on your way down. The com-

reports on your way down. The computer also keeps track of all prior jumps in the array A and lets you know how you compared with previous successful jumps. If you want to recall information from previous runs, then you should store array A in a disk or tape file and read it in before each run.

John Yegge created this program while at the Oak Ridge Associated Universities.

SPLAT CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

WELCOME TO 'SPLAT' -- THE GAME THAT SIMULATES A PARACHUTE JUMP. TRY TO OPEN YOUR CHUTE AT THE LAST POSSIBLE HOMENT WITHOUT GOING SPLAT.

SELECT YOUR OWN TERMINAL VELOCITY (YES OR NO)? NO OK. TERMINAL VELOCITY = 45 MI/MR WANT TO SELECT ACCELERATION OUE TO GRAVITY (YES UR NO)? NO FINE. YOU'RE ON THE SUN. ACCELERATION=896FT/SEC/SEC

ALTITUDE = 8680 FT
TERM.VELOCITY = 66 FT/SEC +-5%
ACCELERATION = 896 FT/SEC/SEC +-5%
SET THE TIMER FOR YOUR FREEFALL.

```

In this game, the computer selects a random number from 1 to 100 (or any value you set in Statement 150). You try to guess the number and the computer gives you clues to tell you how close you're getting. One star (*) means you're far away from the number; seven stars (******) means you're really close. You get 7 guesses.

On the surface this game is very similar to GUESS; however, the guessing strategy is quite different. See if you can come up with one or more approaches to finding the mystery number.

Bob Albrecht of People's Computer Company created this game.

STARS CREATIVE COMPUTINO MORRISTOWN, NEW JERSEY

OO YOU WANT INSTRUCTIONS? YES I AN THINKING OF A WNOLE NUMBER FROM 1 TO 100 TRY TO OUESS MY MUMBER. AFTER YOU OUESS, I WILL TYPE ONE OR MORE STARS (*). THE MORE STARS I TYPE, THE CLOSER YOU ARE TO MY MUNGER.
ONE STAR (*) NEAMS FAR AWAY, SEVEN STARS (*******)
NEAMS REALLY CLOSE! YOU GET 7 GUESSES.

OK, I AN THINKING OF A NUNGER, START GUESSING.

YOUR GUESS? 50

YOUR DUESS? 25 ************************** YOU GOT IT IN 2 GUESSES!!! LET'S PLAY AGAIN...

tock Market

This program "plays" the stock market. You will be given \$10,000 and may buy or sell stocks. Stock prices and trends are generated randomly; therefore, this model does not represent exactly what happens on the exchange (Depending upon your point of view, you may feel this is quite a good representation!)

Every trading day, a table of stocks, their prices, and number of shares in your portfolio is printed. Following this, the initials of each stock are printed followed by a question mark. You indicate your transaction in number of shares — a positive number to buy, negative number to sell, or 0 to do no trading. A brokerage fee of 1% is charged on all transactions (a bargain!) Note: Even if the value of a stock drops to zero, it may rebound again — then again, it may not.

This program was created by D. Pessel, L. Braun, and C. Losik of the Huntington Computer Project at

SUNY, Stony Brook, N.Y.

CREATIVE COMPUTING NORRISTOWN, MEW JERSEY

OO YOU WANT THE INSTRUCTIONS (YES-TYPE 1, MO-TYPE 0)? 1

THIS PROGRAM PLAYS THE STOCK MARKET. YOU WILL BE GIVEM \$10,000 AMD MAY BUY OR SELL STOCKS. THE STOCK PRICES WILL BE GEMERATED RAMDOMLY AND THEREFORE THIS MODEL DOES NOT REPRESENT EXACTLY WHAT MAPPENS ON THE EXCHANGE. A TABLE OF AVAILABLE STOCKS, THEIR PRICES, AND THE NUMBER OF SHARES IN YOUR PORTFOLIO WILL BE PRINTED. FOLLOWING THIS, THE INITIALS OF EACH STOCK WILL BE PRINTED WITN A QUESTION NARK. MERE YOU INDICATE A TRANSACTION. TO BUY A STOCK TYPE +NHN, TO SELL A STOCK TYPE -NHN, UNFRE HNN IS INE NUMBER OF SMARES. A BROKERAGE FEE OF 12 WILL BE CHARGED ON ALL TRANSACTIONS. HOTE THAT IF A STOCK'S VALUE DROPS TO ZERO IT MAY REBOUND TO A POSITIVE VALUE AGAIM. YOU HAVE \$10,000 TO INVEST. USE INTEGERS FOR ALL YOUR INPUTS. (NOTE: TO GET A 'FEEL' FOR THE MARKET RUN FOR AT LEAST 10 DAYS) ----G000 LUCK!----

Super Star Trek®

Brief History

Many versions of Star Trek have been kicking around various college campuses since the late sixties. I recall playing one at Carnegie-Mellon Univ. in 1967 or 68, and a very different one at Berkeley. However, these were a far cry from the one written by Mike Mayfield of Centerline Engineering and/or Custom Data. This was written for an HP2000C and completed in October 1972. It became the "standard" Star Trek in February 1973 when it was put in the HP contributed program library and onto a number of HP Data Center machines.

In the summer of 1973, I converted the HP version-to BASIC-PLUS for DEC's RSTS-11 compiler and added a few bits and pieces while I was at it. Mary Cole at DEC contributed enormously to this task too. Later that year I published it under the name SPACWR (Space War — in retrospect, an incorrect name) in my book 101 Basic Computer Games. It is difficult today to find an interactive computer installation that does not have one of these versions of Star Trek available.

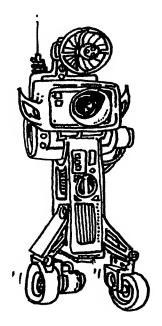

Quadrant Nomenclature

Recently, certain critics have professed confusion as to the origin of the "quadrant" nomenclature used on all standard CG (Cartesian Galactic) maps. Naturally, for anyone with the remotest knowledge of history, no explanation is necessary; however, the following synopsis should suffice for the critics:

As every schoolboy knows, most of the intelligent civilizations in the Milky Way had originated galactic designations of their own choosing well before the Third Magellanic Conference, at which the so-called " 2^6 Agreement" was reached. In that historic document, the participant cultures agreed, in all two-dimensional representations of the galaxy, to specify 64 major subdivisions, ordered as an 8×8 matrix. This was partially in deference to the Earth culture (which had done much in the initial organization of the Federation), whose century-old galactic maps had always shown 16 major regions named after celestial landmarks of the Earth sky. Each of these regions was divided into four "quadrants," designated by ancient "Roman Numerals" (the origin of which has been lost).

To this day, the official logs of starships originating on near-Earth starbases still refer to the major galactic areas as "quadrants."

The relation between the Historical and Standard nomenclatures is shown in the simplified CG map below.

	1	2	3	4	5	6	7	8
1	1	ANTA II	ARES	IV	ı	SIR II	IUS III	IV
2	1	RIC II		IV	ı	DEN II	NEB III	IV

Super Star Trek†Rules and Notes

by Robert Leedom and David Ahl

- 1. OBJECTIVE: You are Captain of the starship "Enterprise"† with a mission to seek and destroy a fleet of Klingon† warships (usually about 17) which are menacing the United Federation of Planets.† You have a specified number of stardates in which to complete your mission. You also have two or three Federation Starbases† for resupplying your ship.
- 2. You will be assigned a starting position somewhere in the galaxy. The galaxy is divided into an 8 x 8 quadrant grid. The astronomical name of a quadrant is called out upon entry into a new region. (See "Quadrant Nomenclature.") Each quadrant is further divided into an 8 x 8 section grid.
- 3. On a section diagram, the following symbols are used:

< " >	Enterprise	>! <	Starbase
†††	Klingon	¢.	Star

- 4. You have eight commands available to you. (A detailed description of each command is given in the program instructions.)
 - NAV Navigate the Starship by setting course and warp engine speed.
 - SRS Short-range sensor scan (one quadrant)
 - LRS Long-range sensor scan (9 quadrants)
 - PHA Phaser† control (energy gun)
 - TOR Photon torpedo control
 - SHE Shield control (protects against phaser fire)
 - DAM Damage and state-of-repair report
 - COM Call library computer
- 5. Library computer options are as follows (more complete descriptions are in program instructions):
 - 0 Cumulative galactic record
 - 1 Status report
 - 2 Photon torpedo course data
 - 3 Starbase navigation data
 - 4 Direction/distance calculator
 - 5 Quadrant nomenclature map
- 6. Certain reports on the ship's status are made by officers of the Enterprise who appeared on the original TV Show—Spock,† Scott,† Uhura,† Chekov,† etc.
- 7. Klingons are non-stationary within their quadrants. If you try to maneuver on them, they will move and fire on you.
- 8. Firing and damage notes:
 - A. Phaser fire diminishes with increased distance between combatants.
 - B. If a Klingon zaps you hard enough (relative toyour shield strength) he will generally cause damage to some part of your ship with an appropriate "Damage Control" report resulting.
 - C. If you don't zap a Klingon hard enough (relative to his shield strength) you won't damage him at all. Your sensors will tell the story.
 - D. Damage control will let you know when out-ofcommission devices have been completely repaired.

- 9. Your engines will automatically shut down if you should attempt to leave the galaxy, or if you should try to maneuver through a star, a Starbase, or heaven help you a Klingon warship.
- 10. In a pinch, or if you should miscalculate slightly, some shield control energy will be automatically diverted to warp engine control (if your shields are operational!).
- 11. While you're docked at a Starbase, a team of tech icians can repair your ship (if you're willing for them to spend the time required—and the repairmen always underestimate...).
- 12. If, to save maneuvering time toward the end of the game, you should cold-bloodedly destroy a Starbase, you get a nasty note from Starfleet Command. If you destroy your *last* Starbase, you lose the game! (For those who think this is too harsh a penalty, delete lines 5360-5390, and you'll just get a "you dumdum!"-type message on all future status reports.)
- 13. End game logic has been "cleaned up" in several spots, and it is possible to get a new command after successfully completing your mission (or, after resigning your old one).
- 14. For those of you with certain types of CRT/keyboards setups (e.g. Westinghouse 1600), a "bell" character is inserted at appropriate spots to cause the following items to flash on and off on the screen:
- The Phrase "*RED*" (as in Condition: Red)
- The character representing your present quadrant in the cumulative galactic record printout.
- 15. This version of Star Trek was created for a Data General Nova 800 system with 32K or core. So that it would fit, the instructions are separated from the main program via a CHAIN. For conversion to DEC BASIC-PLUS, Statement 160 (Randomize) should be moved after the return from the chained instructions, say to Statement 245. For Altair BASIC, Randomize and the chain instructions should be eliminated.

Sample Run - Instructions

```
***********
   * * SUPER STAR TREK * *
```

DO YOU NEED INSTRUCTIONS (Y/N) ? Y

TURN THE TIY ON-LINE AND HII ANY KEY EXCEPT PETUEN INSTRUCTIONS FOR 'SUPER STAR TREK'

1. WHEN YOU SEE COMMAND ? PRINTED, ENTER ONE OF THE LEGAL COMMANDS (NAV.SRS,LRS,PHA.TOR.SHE DAM,COM, OR XXX).
2. IF YOU SHOULD TYPE IN AN ILLEGAL COMMAND, YOU'LL GET A SHORT LIST OF THE LEGAL COMMANDS PRINTED OUT.
3. SOME COMMANDS REQUIRE YOU TO ENTER DATA (FOR EXAMPLE, THE "MAY' COMMAND COMES BACK WITH 'COURSE (I-9) ?'.) IF YOU TYPE IN ILLEGAL DATA (LIKE NEGATIVE NUMBERS), THAT COMMAND WILL. BE ABORTED WILL BE ABORTED

THE GALAXY IS DIVIDED INTO AN 8 \times 8 QUADRANT GRID, AND EACH QUADRANT IS FURTHER DIVIDED INTO AN 8 \times 8 SECTOR GRID.

YOU WILL BE ASSIGNED A STARTING POINT SOMEWHERE IN THE GALAXY TO BEGIN A TOUR OF DUTY AS COMMANDER OF THE STARSHIP VENTERPRISEY, YOUR MISSION: TO SEEK AND DESTROY THE FLEET OF KLINGON WARWHIPS WHICH ARE MEMACING THE UNITED FEDERATION OF

YOU HAVE THE FOLLOWING COMMANDS AVAILABLE TO YOU AS CAPTAIN OF THE STARSHIP ENTERPRISE:

\NAV\ COMMAND = WARP ENGINE CONTROL -COURSE IS IN A CIRCULAR NUMERICAL
VECTOR ARRANGEMENT AS SHOWN
INTEGER AND REAL VALUES MAY BE
USED. (THUS COURSE 1.5 IS HALFWAY BETWEEN 1 AND 2 4 3 2 VALUES MAY APPROACH 9.0, WHICH ITSELF IS EQUIVALENT TO 1.0 6 7 8 COURSE

ONE WARP FACTOR IS THE SIZE OF ONE QUADTAUT. THEREFORE, TO GET FROM QUADRANT 6.5 TO 5.5. YOU WOULD USE COURSE 3. WARP FACTOR 1.

\SRS\ COMMAND = SHORT PANGE SENSOR SCAN SHOWS YOU A SCAN OF YOUR PRESENT QUADRANT.

SYMBOLOGY ON YOUR SENSOR SCREEN IS AS FOLLOWS:

<pre

* = STAR

A CONDENSED 'STATUS REPORT' WILL ALSO BE PRESENTED.

LES COMMIAND = LONG RANGE SENSOR SCAN

SHOWS CONDITIONS IN SPACE FOR ONE QUADRANT ON EACH SIDE

OF THE ENTERPRISE (WHICH IS IN THE MIDDLE OF THE SCAN)

THE SCAN IS CODED IN THE FORM \##W. WHERE TH UNITS DIGIT

IS THE NUMBER OF STARS, THE TENS DIGIT IS THE NUMBER OF

STARBASES, AND THE HUNDRESOS DIGIT IS THE NUMBER OF

KLINGONS.

EXAMPLE - 207 = 2 KLINGONS, NO STARBASES, & 7 STARS.

\PHA\ COMMAND = PHASER CONTROL.

ALLOWS YOU TO DESTROY THE KLINGON BATTLE CRUISERS BY ZAPPING THEM WITH SULTABLY LARGE UNITS OF ENERGY TO OEPLETE THEIR SHIELD POWER. (REIBER, KLINGONS HAVE PHASERS TOO!)

NOR COMMAND = PHOION TORPEDO CONTROL

TORPEDO COURSE IS THE SAME AS USED IN WARP ENGINE CONTROL

IF YOU HIT THE KLINGON VESSEL, HE IS DESTROYED AND

CANNOT FIRE BACK AT YOU. IF YOU MISS, YOU ARE SUBJECT TO

HIS PHASER FIRE. IN ELIHER CASE, YOU ARE ALSO SUBJECT TO

THE PHASER FIRE OF ALL OTHER KLINGONS IN THE QUADRANT.

THE LIBRARY-COMPUTER (\COM\ COMMAND) HAS AN OPTION TO COMPUTE TORPEDO TRAJECTORY FOR YOU (OPTION 2)

SHEN COMMAND = SHIELD CONTROL DEFINES THE NUMBER OF ENERGY UNITS TO BE ASSIGNED TO THE SHIELDS. ENERGY IS TAKEN FROM TOTAL SHIP'S ENERGY. NOTE THAT THE STATUS DISPLAY TOTAL ENERGY INCLUDES SHIELD ENERGY

\DAM\ COMMAND = DAMMAGE CONTROL REPORT
GIVES THE STATE OF REPAIR OF ALL DEVICES. WHERE A NEGATIVE
'STATE OF REPAIR' SHOWS THAT THE DEVICE IS TEUPORAPILY DAMAGED.

DAMAGED.

COMN COMMAND = LIBRARY-COMPUTER
THE LIBRARY-COMPUTER CONTAINS SIX OPTIONS:
OPTION 0 = CUMULATIVE GALACTIC RECORD
THIS OPTION SHOWES COMPUTER HEHORY OF THE RESULTS OF ALL
PREVIOUS SHORT AND LONG RANGE SENSOR SCANS

OPTION I = STATUS REPORT
THIS OPTION SHOWS THE NUMBER OF KLINGONS, STARDATES,
AND STARBASES REMAINING IN THE GAME.

OPTION 2 = PHOTON TORPEDO DATA
WHICH GIVES DIRECTIONS AND DISTANCE FROM THE ENTERPRISE
TO ALL KLINGONS IN YOUR CUADRANT
OPTION 3 = STARBASE HAV DATA
THIS OPTION GIVES DIRECTION AND DISTANCE TO ANY
STARBASE WITHIN YOUR QUADRANT
OPTION 4 = DIRECTION/DISTANCE CALCULATOR
THIS OPTION ALLOYS YOU TO ENTER COORDINATES FOR
DIRECTION/DISTANCE CALCULATIONS
OPTION S = CALACTIC /REGION NAME/ HAP
THIS OPTION PRINTS THE NAMES OF THE SIXTEEN HAJOR
GALACTIC REGIONS REFERRED TO IN THE GAME.

```

Monym

A synonym of a word is another word (in the English language) which has the same, or very nearly the same, meaning. This program tests your knowledge of synonyms of a few common words.

The computer chooses a word and asks you for a synonym. The computer then tells you whether you're right or wrong. If you can't think of a synonym, type "HELP" which causes a synonym to be printed.

You may put in words of your choice in the data statements (510-600). The number following DATA in Statement 500 is the total number of data statements. In each data statement, the first number is the number of words in that statement.

Can you think of a way to make this into a more general kind of CAI program for any subject?

Walt Koetke of Lexington High School, Massachusetts created this program.

SYNONYN CREATIVE COMPUTING HORRISTOWN, NEW JERSEY

A SYNONYM OF A WORD MEANS ANOTHER WORD IN THE ENGLISM LANGUAGE WHICH HAS THE SAME OR VERY NEARLY THE SAME NEANING. I CHOOSE A WORD -- YOU TYPE A SYNONYM. IF YOU CAN'T THINK OF A SYNONYM, TYPE THE WORD 'HELP' AND I WILL TELL YOU A SYNONYH.

WHAT IS A SYNONYN OF RED? NELP **** A SYNONYM OF RED IS RUBY.

Target

In this program, you are firing a weapon from a spaceship in 3-dimensional space. Your ship, the Starship Enterprise, is located at the origin (0,0,0) of a set of x,y,z coordinates. You will be told the approximate location of the target in 3-dimensional rectangular coordinates, the approximate angular deviation from the x and z axes in both radians and degrees, and the approximate distance to the target.

Given this information, you then proceed to shoot at the target. A shot within 20 kilometers of the target destroys it. After each shot, you are given information as to the position of the explosion of your shot and a somewhat improved estimate of the location of the target. Fortunately, this is just practice and the target doesn't shoot back. After you have attained proficiency, you ought to be able to destroy a target in 3 or 4 shots.

The author is H. David Crockett of Fort Worth, Texas.

However, attaining proficiency might

TARGET
CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

YOU ARE THE WEAPONS OFFICER ON THE STARSHIP ENTERPRISE AND THIS IS A TEST TO SEE HOW ACCURATE A SHOT YOU ARE IN A THREE-DIMENSIONAL RANGE. YOU WILL BE TOLD THE RADIAN OFFSET FOR THE X AND Z AXES, THE LOCATION OF THE TARGET IN THREE DIMENSIONAL RECTANGULAR COORDINATES, THE APPROXIMATE NUMBER OF OEGREES FROM THE X AND Z AXES, AND THE APPROXIMATE DISTANCE TO THE TARGET. YOU WILL THEN PROCEEED TO SHOOT AT THE TARGET UNTIL IT IS DESTROYED!

GOOD LUCK!!

take a while!

3-D PLOT will plot the family of curves of any function. The function Z is plotted as "rising" out of the x-y plane with x and y inside a circle of radius 30. The resultant plot looks almost 3dimensional.

You set the function you want plotted in line 5. As with any mathematical plot, some functions come out "prettier" than others. Here are some that work nicely:

5 DEF FNA (Z) = 30*EXP (-Z*Z/100) 5 DEF FNA (Z) = SQR (900.01-Z*Z)*.9-2

5 DEF FNA $(Z) = 30*(COS(Z/16))^2$ 2

5 DEF FNA (Z) = 30-30*SIN (Z/18)

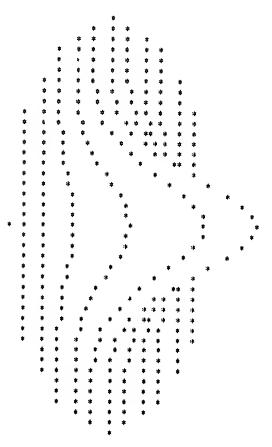

5 DEF FNA (\dot{Z}) = 30*EXP (-COS (Z/16)) -30

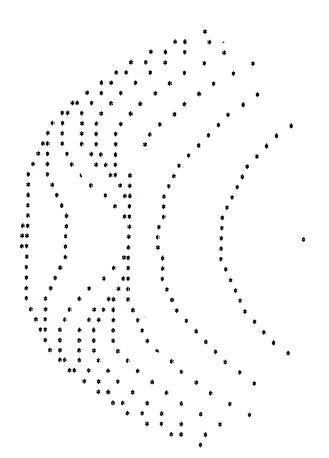

(Bessel function—Summerfeld's Integral)

5 DEF FNA (Z) = 30*SIN (Z/10)

The author of this amazingly clever program is Mark Bramhall of DEC.

3-D Tic-Tac-Toe

3-D TIC-TAC-TOE is the game of tictac-toe in a 4x4x4 cube. You must get 4 markers in a row or diagonal along any 3-dimensional plane in order to win.

Each move is indicated by a 3-digit number (digits not seperated by commas), with each digit between 1 and 4 inclusive. The digits indicate the level, column, and row, respectively, of the move. You can win if you play correctly; although, it is considerably more difficult than standard, two-dimensional 3x3 tic-tac-toe.

This version of 3-D TIC-TAC-TOE is from Dartmouth College.

TIC TAC TOE
CREATIVE COMPUTINO NORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES

THE GAME IS TIC-TAC-TOE IN A 4 X 4 X 4 CUBE. EACH NOVE IS INDICATED BY A 3 DIGIT NUMBER, WITH EACH DIGIT BETWEEN 1 AND 4 INCLUSIVE. THE DIGITS INDICATE THE LEVEL, ROW, AND COLUMN, RESPECTIVELY, OF THE OCCUPIED PLACE.

TO PRINT THE PLAYING BOARD, TYPE O (ZERO) AS YOUR HOVE. THE PROGRAM WILL PRINT THE BOARD WITH YOUR HOVES INOICATED WITH A (Y), THE MACNINE'S NOVES WITH AN (M), AND UNUSED SOURRES WITH A ().

Tic Tac Toe

The game of tic-tac-toe hardly needs any introduction. In this one, you play versus the computer. Moves are entered by number:

1 2 3

4 5 6

7 8 9

If you make any bad moves, the computer will win; if the computer makes a bad move, you can win; otherwise, the game ends in a tie.

A second version of the game is included which prints out the board after each move. This is ideally suited to a CRT terminal, particularly if you modify it to not print out a new board after each move, but rather use the cursor to make the move.

The first program was written by Tom Koos while a student researcher at the Oregon Museum of Science and Industry; it was extensively modified by Steve North of Creative Computing. The author of the second game is Curt Flick of Akron, Ohio.

Tower

This is a simulation of a game of logic that originated in the middle East. It is sometimes called Pharoah's Needles, but its most common name is the Towers of Hanoi.

Legend has it that a secret society of monks live beneath the city of Hanoi. They possess three large towers or needles on which different size gold disks may be placed. Moving one at a time and never placing a larger on a smaller disk, the monks endeavor to move the tower of disks from the left needle to the right needle. Legend says when they have finished moving this 64-disk tower, the world will end. How many moves will they have to make to accomplish this? If they can move 1 disk per minute and work 24 hours per day, how many years will it take?

In the computer puzzle you are faced with three upright needles. On the leftmost needle are placed from two to seven graduated disks, the largest being on the bottom and smallest on the top. Your object is to move the entire stack of disks to the rightmost needle. However, you may only move one disk at a time and you may never place a larger disk on top of a smaller one.

In this computer game, the disks are referred to by their size — i.e., the smallest is 3, next 5, 7, 9, 11, 13, and 15. If you play with fewer than 7 disks always use the largest, i.e. with 2 disks you would use nos. 13 and 15. The program instructions are self-explanatory. Good luck!

Charles Lund wrote this program while at the American School in the Hague, Netherlands.

TOWERS
CREATIVE COMPUTING HORRISTOWN, NEW JERSEY

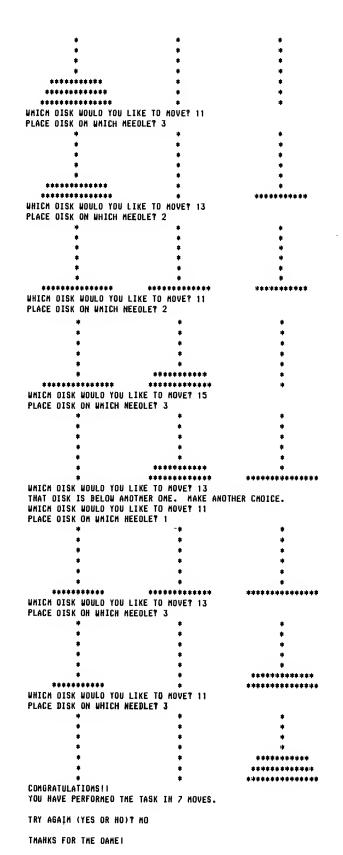

TOWERS OF MAMOI PUZZLE

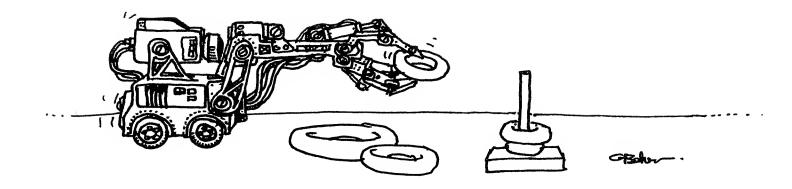

YOU MUST TRANSFER THE DISKS FROM THE LEFT TO THE RIGHT TOWER, ONE AT A TIME, MEVER PUTTING A LARDER DISK OM A SMALLER DISK.

HOW MANY DISKS DO YOU WANT TO HOVE (7 IS HAX)? 3

IN THIS PROGRAM, WE SHALL REFER TO DISKS BY NUMERICAL CODE. 3 WILL REPRESENT THE SHALLEST DISK, 5 THE NEXT SIZE, 7 THE HEXT, AND SO OM, UP TO 15. IF YOU OD THE PUZZLE WITH 2 DISKS, THEIR CODE MANES WOULD BE 13 AND 15. WITH 3 DISKS THE CODE MAHES WOULD BE 11, 13 AND 15, ETC. THE NEEDLES ARE MUMBERED FROM LEFT TO RIGHT, 1 TO 3. WE WILL START WITH THE DISKS ON MEEDLE 1, AND ATTEMPT TO MOVE THEM TO MEEDLE 3.

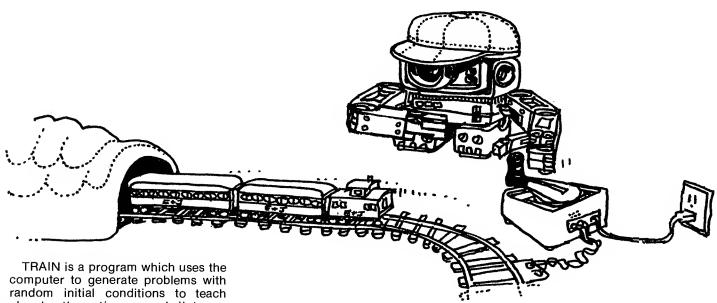

GOOD LUCKI

Train

TRAIN is a program which uses the computer to generate problems with random initial conditions to teach about the time-speed-distance relationship (distance = rate x time). You then input your answer and the computer verifies your response.

TRAIN is merely an example of a student-generated problem. Maximum fun (and benefit) comes more from writing programs like this as opposed to solving the specific problem posed. Exchange your program with others—you solve their problem and let them solve yours.

TRAIN was originally written in FOCAL by one student for use by others in his class. It was submitted to us by Walt Koetke, Lexington High School, Lexington, Mass.

TRAIN

This is another in the family of "guess the mystery number" games. In TRAP the computer selects a random number between I and 100 (or other limit set in statement 20). Your object is to find the number. On each guess, you enter 2 numbers trying to trap the mystery number between your two trap numbers. The computer will tell you if its number is larger or smaller than your trap numbers or if you have trapped the number.

To win the game, you must guess the mystery number by entering it as the same value for both of your trap numbers. You get 6 guesses (this should be changed in statement 10 if you change the guessing limit in

statement 20).

After you have played GUESS, STARS, and TRAP, compare the guessing strategy you have found best for each game. Do you notice any similarities? What are the differences? Can you write a new guessing game with still another approach?

TRAP was suggested by a 10-year old when he was playing GUESS. It was originally programmed by Steve UI-Iman and extensively modified into its final form by Bob Albrecht of People's Computer Co.

CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

INSTRUCTIONS? YES I AN THINKING OF A NUMBER BETWEEN 1 AND 100 TRY TO GUESS NY NUMBER. ON EACH DUESS, YOU ARE TO ENTER 2 NUMBERS, TRYING TO TRAP NY NUMBER BETWEEN THE TWO NUMBERS. I WILL TELL YOU IF YOU HAVE TRAPPED MY NUMBER, IF MY MUNBER IS LARGER THAN YOUR TWO NUMBERS, OR IF MY NUMBER IS SHALLER THAN YOUR TWO NUMBERS. IF YOU WANT TO DUESS ONE SINGLE NUMBER, TYPE YOUR GUESS FOR BOTH YOUR TRAP NUMBERS. YOU DET & GUESSES TO GET NY NUMBER.

GUESS # 1 ? 25,75 YOU NAVE TRAPPED NY NUMBER.

GUESS # 2 ? 40,60 MY NUNBER IS SNALLER TNAN YOUR TRAP NUMBERS.

GUESS # 3 ? 30,37 YOU NAVE TRAPPED MY NUMBER.

6UESS # 4 ? 34,36 YOU NAVE TRAPPED MY NUMBER.

GUESS # 5 ? 35.35 MY NUMBER IS SMALLER THAN YOUR TRAP NUMBERS.

DUESS # 6 ? 34,34 YOU GOT IT!!!

TRY ADAIN.

```
GUESS # 1 ? 30.80
YOU NAVE TRAPPED MY NUMBER.
DUESS # 2 7 50,60
MY NUMBER IS SHALLER THAN YOUR TRAP NUMBERS.
GUESS # 3 7 35,45
MY NUMBER IS SMALLER THAN YOUR TRAP NUMBERS.
DUESS # 4 7 32,34
YOU NAVE TRAPPED NY NUMBER.
OUESS # 5 ? 33,33
MY NUMBER IS SMALLER THAN YOUR TRAP NUMBERS.
GUESS # 6 ? 32,32
YOU GOT IT!!!

23 Matches

In the game of twenty-three matches, you start with 23 matches lying on a table. On each turn, you may take 1, 2, or 3 matches. You alternate moves with the computer and the one who has to take the last match loses.

The easiest way to devise a winning strategy is to start at the end of the game. Since you wish to leave the last match to your opponent, you would like to have either 4, 3, or 2 on your last turn so you can take away 3, 2, or 1 and leave 1. Consequently, you would like to leave your opponent with 5 on his next to last turn so, no matter what his move, you are left with 4, 3, or 2. Work this backwards to the beginning and you'll find the game can effectively be won on the first move. Fortunately, the computer gives you the first move, so if you play wisely, you can win.

After you've mastered 23 Matches, move on to BATNUM and then to NIM.

This version of 23 Matches was originally written by Bob Albrecht of People's Computer Company.

23 MATCHES
CREATIVE COMPUTINO HORRISTOWN, NEW JERSEY

THIS IS A GAME CALLED '23 MATCHES'.

WHEN IT 1S YOUR TURN, YOU NAY TAKE ONE, TWO, OR THREE HATCHES. THE OBJECT OF THE OANE IS NOT TO HAVE TO TAKE THE LAST NATCH.

LET'S FLIP A COIM TO SEE WHO GOES FIRST. IF IT CONES UP HEADS, I WILL WIM THE TOSS.

HEADSI I WIMI HAI HAI PREPARE TO LOSE, HEATBALL-HOSE II

I TAKE 2 MATCHES THE NUMBER OF MATCHES IS MOW 21

This program plays the card game of War. In War, the card deck is shuffled. then two cards are dealt, one to each player. Players compare cards and the higher card (numerically) wins. In case of a tie, no one wins. The game ends when you have gone through the whole deck (52 cards, 26 games) or when you decide to quit.

The computer gives cards by suit and number, for example, S-7 is the 7 of spades.

WAR

Weekday

This program gives facts about your date of birth (or some other day of interest). It is not prepared to give information on people born before the use of the current type of calendar, i.e. year 1582.

You merely enter today's date in the form — month, day, year and your date of birth in the same form. The computer then tells you the day of the week of your birth date, your age, and how much time you have spent sleeping, eating, working, and relaxing.

This program was adapted from a GE timesharing program by Tom Kloos at the Oregon Museum of Science and Industry.

WORD is a combination of HANGMAN and BAGELS. In this game, the player must guess a word with clues as to letter position furnished by the computer. However, instead of guessing one letter at a time. in WORD you guess an entire word (or group of 5 letters, such as ABCDE). The computer will tell you if any letters that you have guessed are in the mystery word and if any of them are in the correct position. Armed with these clues, you go on guessing until you get the word or, if you can't get it, input a "?" and the computer will tell you the mystery word.

You may change the words in Data Statements 512 and 513, but they must be 5-letter words.

The author of this program is Charles Reid of Lexington High School, Lexington, Massachusetts.

WORD

CREATIVE COMPUTING NORRISTOWN, NEW JERSEY

I AN THINKING OF A WORD -- YOU GUESS IT. I WILL GIVE YOU CLUES TO HELP YOU GET IT. OOOD LUCK!!

GUESS A FIVE LETTER WORD? FGHIJ
THERE WERE O MATCHES AND THE COMNON LETTERS WERE...
FRON THE EXACT LETTER MATCHES, YOU KNOW................

IF YOU GIVE UP, TYPE '?' FOR YOUR NEXT GUESS.

GUESS A FIVE LETTER WORD? LNMOP
THERE WERE 1 NATCHES AND THE COMMON LETTERS WERE...M
FRON THE EXACT LETTER NATCHES, YOU KNOW....---MO--

IF YOU GIVE UP, TYPE '?' FOR YOUR MEXT GUESS.

WANT TO PLAY AGAIN? YES
YOU ARE STARTING A NEW GANE...
GUESS A FIVE LETTER WORD? ABCDE
THERE WERE O NATCHES AND THE CONNON LETTERS WERE...
FRON THE EXACT LETTER NATCHES, YOU KNOW......

IF YOU GIVE UP, TYPE '?' FOR YOUR NEXT GUESS.

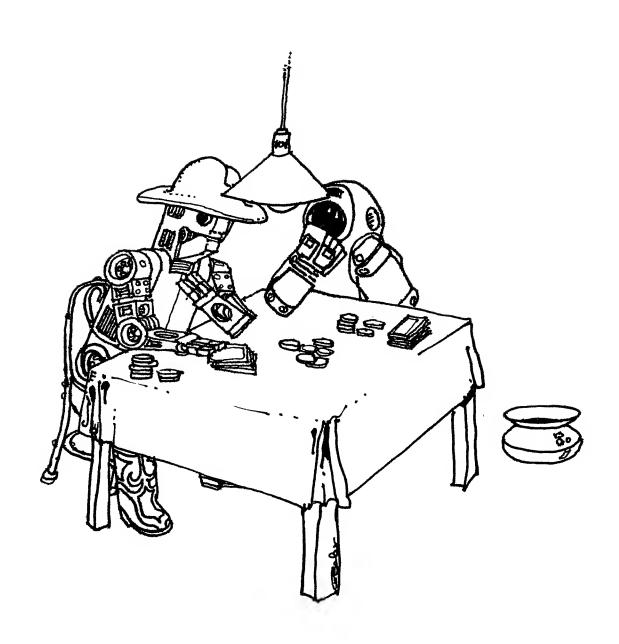

IF YOU GIVE UP, TYPE 'T' FOR YOUR NEXT GUESS.

GUESS A FIVE LETTER WORD? FISTS
THERE WERE 5 NATCHES AND THE CONMON LETTERS WERE...FISST
FRON THE EXACT LETTER NATCHES, YOU KNOW.................FI----

GUESS A FIVE LETTER WORD? FIRST
THERE WERE 5 MATCHES AND THE COMMON LETTERS WERE...FIRST
FRON THE EXACT LETTER NATCHES, YOU KNOW......FIRST
YOU HAVE GUESSED THE WORD. IT TOOK 5 GUESSES!

WANT TO PLAY AGAIN? NO
